

1. Record Nr.	UNINA9911018942203321
Autore	Iyer Sridhar
Titolo	Intelligent Spectrum Management : Towards 6G
Pubbl/distr/stampa	Newark : , : John Wiley & Sons, Incorporated, , 2025 ©2025
ISBN	9781394201228 1394201222 9781394201211 1394201214 9781394201235 1394201230
Edizione	[1st ed.]
Descrizione fisica	1 online resource (307 pages)
Altri autori (Persone)	KallaAnshuman LopezOnel Alcaraz De AlwisChamitha
Disciplina	621.3845/6
Soggetti	Radio frequency allocation - Management 6G mobile communication systems Mobile communication systems Artificial intelligence
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Sommario/riassunto	"With the increasing need of smarter technologies, mobile networks are becoming stronger than ever. To provide a complete understanding of spectrum management aspects and development in this area, this book discusses the spectrum management technologies in mobile networks between 1G to 5G, including the principles, technical aspects, applications, and challenges. The authors discuss the evolution of spectrum management towards 6G, and various technologies that can be implemented to manage the spectrum; these technologies include blockchain, deep learning, and reinforcement learning, used to enable intelligent spectrum management. The book also presents the convergence of AI and Blockchain for spectrum management and

focuses on infrastructure for spectrum management."
