

1. Record Nr.	UNINA9911019506703321
Autore	Ratiney Helene
Titolo	The Challenges of MRI : Techniques and Quantitative Methods for Health
Pubbl/distr/stampa	Newark : , : John Wiley & Sons, Incorporated, , 2024 ©2024
ISBN	9781394284030 1394284039 9781394284009 1394284004
Edizione	[1st ed.]
Descrizione fisica	1 online resource (398 pages)
Altri autori (Persone)	BeufOlivier
Disciplina	616.07548
Soggetti	Magnetic resonance imaging Diagnostic imaging
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Nota di contenuto	Cover -- Title Page -- Copyright Page -- Contents -- Introduction -- Chapter 1. MRI Principles, Hardware Components and Quantification -- 1.1. Introduction -- 1.2. Macroscopic magnetization and static magnetic field B0 -- 1.2.1. Nuclear magnetization -- 1.2.2. Magnet -- 1.2.3. Roles and orders of magnitude -- 1.2.4. Technical approaches -- 1.2.5. Novel technologies -- 1.3. Description of the magnetization evolution -- 1.4. Excitation: perturbing the magnetization -- 1.4.1. Principle -- 1.4.2. Transmit coil -- 1.4.3. Radiofrequency signal reception -- 1.5. Spatial localization in MRI -- 1.5.1. Principle -- 1.5.2. Magnetic field gradients -- 1.6. Signal-to-noise ratio notion in MRI -- 1.7. Useful signal and information -- 1.7.1. A "complex" signal in a mathematical and bio-physical sense -- 1.7.2. From qualitative to quantitative -- 1.8. Conclusion -- 1.9. Acknowledgments -- 1.10. References -- Chapter 2. Radiofrequency Coils: Theoretical Principles and Practical Guidelines -- 2.1. Coil as an electrical resonant circuit -- 2.1.1. Basic concepts -- 2.1.2. Coil tuning and matching -- 2.2. Coil as a source of a magnetic RF field -- 2.2.1. Polarization and 1 B+ and 1 B- fields -- 2.3. Transmit coil -- 2.4. Receive coil -- 2.4.1. Sensitivity

factor -- 2.4.2. Noise regimes -- 2.5. Decoupling -- 2.6. RF coil and safety -- 2.6.1. Specific absorption rate and temperature -- 2.6.2. Transmission and safety -- 2.7. Advanced topics and coil challenges -- 2.8. Conclusion -- 2.9. References -- Chapter 3. Fast Imaging and Acceleration Techniques -- 3.1. Introduction -- 3.2. Definition of fast imaging -- 3.3. Fast accelerated sequences -- 3.3.1. Sequence optimization -- 3.3.2. Turbo spin echo and echo-planar imaging -- 3.3.3. Non-Cartesian methods -- 3.4. Acceleration methods -- 3.4.1. Partial Fourier -- 3.4.2. Parallel imaging. 3.4.3. Simultaneous multislice imaging -- 3.4.4. Iterative reconstruction -- 3.5. Applications -- 3.6. References -- Chapter 4. The Basics of Diffusion and Intravoxel Incoherent Motion MRI -- 4.1. Introduction -- 4.2. The history and physics of diffusion -- 4.3. Diffusion and NMR -- 4.3.1. First NMR measurements of diffusion -- 4.3.2. Measurements of diffusion with pulsed gradients: the Stejskal and Tanner method -- 4.4. Water diffusion in biological tissues -- 4.5. Diffusion magnetic resonance imaging -- 4.5.1. Diffusion MRI pulse sequences -- 4.5.2. Applications of DW-MRI -- 4.6. IntraVoxel Incoherent Motion MRI -- 4.7. Conclusion -- 4.8. References -- Chapter 5. Functional MRI -- 5.1. BOLD-contrast functional imaging and brain connectivity -- 5.1.1. Introduction -- 5.1.2. BOLD-contrast functional MRI principles -- 5.1.3. fMRI activation paradigms -- 5.1.4. Resting fMRI and functional cerebral connectivity mapping -- 5.2. Diffusion MRI and brain function -- 5.2.1. Introduction -- 5.2.2. IVIM fMRI -- 5.2.3. Diffusion functional MRI -- 5.2.4. Toward functional tractography: a global diffusion framework within the brain connectome -- 5.3. Conclusion -- 5.4. References -- Chapter 6. Vascular Imaging: Flow and Perfusion -- 6.1. Introduction -- 6.2. Contrast agents -- 6.2.1. Biological behavior -- 6.2.2. Diamagnetism, paramagnetism and superparamagnetism -- 6.2.3. Relaxivity effect -- 6.2.4. Susceptibility effect -- 6.3. Angiography -- 6.3.1. White-blood imaging -- 6.3.2. Phase contrast imaging -- 6.3.3. Black-blood imaging -- 6.3.4. Other techniques -- 6.3.5. Dynamic angiography -- 6.4. Perfusion imaging -- 6.4.1. Dynamic susceptibility contrast -- 6.4.2. Dynamic contrast-enhanced -- 6.4.3. Arterial spin labeling (ASL) -- 6.4.4. Experimental approaches -- 6.5. Considerations for imaging in humans and small animals -- 6.5.1. Angiography in rodents. 6.5.2. Perfusion MRI in rodents -- 6.6. References -- Chapter 7. Quantitative Biomechanical Imaging via Magnetic Resonance Elastography -- 7.1. Fundamentals of magnetic resonance elastography -- 7.1.1. Introduction -- 7.1.2. MRE signal encoding -- 7.1.3. MRE data reconstruction -- 7.2. MRE sequences -- 7.2.1. Fractional encoding -- 7.2.2. Multidirectional encoding -- 7.2.3. Diffusion MRE -- 7.2.4. Optimal control MRE -- 7.3. Main targeted organs and applications -- 7.3.1. Liver MRE -- 7.3.2. Brain MRE -- 7.3.3. MRE and other organs -- 7.3.4. Other applications -- 7.4. Conclusion -- 7.5. Acknowledgments -- 7.6. References -- Chapter 8. Imaging of Dipolar Interactions in Biological Tissues: ihMT and UTE -- 8.1. Introduction -- 8.2. Origins of ultrashort T2 -- 8.2.1. Dipolar coupling in NMR -- 8.2.2. Dipolar resonance line broadening -- 8.2.3. Motional averaging -- 8.3. Imaging of the inhomogeneous magnetization transfer -- 8.3.1. Dipolar order and radiofrequency saturation -- 8.3.2. Dipolar order and inhomogeneous magnetization transfer -- 8.3.3. Specificity of the ihMT signal and relaxation of the dipolar order -- 8.3.4. Specificity of the ihMT signal to myelin -- 8.3.5. Research outlook -- 8.4. Ultrashort echo time imaging -- 8.4.1. Definition of T2 ranges -- 8.4.2. Distribution of short T2 values in cerebral tissue -- 8.4.3. What are the technical challenges for detecting signals with ultrashort T2? -- 8.4.4.

What are the challenges for the characterization of signals with ultrashort T2 in the cerebral tissue? -- 8.4.5. Applications: myelin imaging -- 8.5. Conclusion -- 8.6. References -- Chapter 9. In Vivo MR Spectroscopy and Metabolic Imaging -- 9.1. Introduction -- 9.2. In vivo MR spectroscopy -- 9.2.1. Free induction decay signal -- 9.2.2. Chemical shift and dipolar coupling -- 9.2.3. Metabolites investigated in MRS. 9.2.4. Principle of signal localization -- 9.2.5. Signal editing, suppression and inversion -- 9.2.6. Experimental considerations in MRS -- 9.3. Processing and quantification of MRS signals -- 9.3.1. Good practices for preprocessing MRS/CSI data -- 9.3.2. Quantification method -- 9.4. Chemical exchange saturation transfer imaging -- 9.4.1. General principle -- 9.4.2. Conditions for CEST effect -- 9.4.3. Saturation transfer -- 9.4.4. Characterization of the magnetization transfer -- 9.5. Non-proton nuclei MR spectroscopy or imaging -- 9.5.1. Nuclei of interest in metabolic MRS/MRI -- 9.5.2. Applications overview -- 9.6. Conclusion -- 9.7. References -- Chapter 10. Physical-model-constrained MRI: Fast Multiparametric Quantification -- 10.1. Introduction -- 10.2. Multiparametric MRI based on chemical-shift-sensitive acquisitions -- 10.2.1. Signal's origin and chemical-shift-encoded acquisitions -- 10.2.2. Physical models and optimization methods for the quantification -- 10.2.3. Clinical and preclinical applications -- 10.3. Multiparametric MRI using steady-state acquisitions in repeated fast sequences -- 10.3.1. Steady state in a stationary sequence without transverse effects -- 10.3.2. Transverse effects considerations for describing steady states -- 10.3.3. Uses in multiparametric quantitative imaging -- 10.3.4. Clinical and preclinical applications -- 10.3.5. Conclusion -- 10.4. MRI fingerprinting -- 10.4.1. Concept -- 10.4.2. Different types of measurements -- 10.4.3. Technical developments -- 10.4.4. Applications and perspectives -- 10.5. Conclusion -- 10.6. References -- Chapter 11. Interventional MRI -- 11.1. Introduction to interventional MRI -- 11.1.1. Intervention planning -- 11.1.2. Pre-operative imaging -- 11.1.3. Post-operative follow-up imaging -- 11.2. Technical considerations in interventional MRI. 11.2.1. Choice of the MRI acquisition sequence -- 11.2.2. Image reconstruction -- 11.2.3. Image analysis and display -- 11.2.4. Motion management -- 11.3. Interventional MRI hardware -- 11.3.1. Intracorporeal medical devices -- 11.3.2. Extracorporeal therapeutic medical devices -- 11.4. MR-Linac -- 11.5. MRI thermometry for guided thermal therapies -- 11.5.1. Principle of MRI thermometry -- 11.5.2. Practical implementation, advantages and limitations of MRI thermometry -- 11.6. High-intensity focused ultrasound -- 11.6.1. General principles -- 11.6.2. Application domains -- 11.7. Perspectives of interventional MRI -- 11.8. References -- Chapter 12. Ultra-high Field Imaging -- 12.1. Historical overview -- 12.2. Quest toward higher field MR systems - why? -- 12.2.1. Advantages and benefits of ultra-high field systems -- 12.2.2. Disadvantages and challenges -- 12.3. Quest toward higher fields - how? -- 12.3.1. Technical constraints -- 12.3.2. Physiological constraints, contraindications and safety -- 12.4. Main applications and novel opportunities -- 12.4.1. Cerebrovascular diseases -- 12.4.2. Brain tumors -- 12.4.3. Focal epilepsy -- 12.4.4. Multiple sclerosis -- 12.4.5. Sodium imaging -- 12.4.6. Creating new normalization spaces (templates) -- 12.4.7. Imaging of the cartilage and muscle injuries -- 12.5. Parallel transmission: technical solutions and imaging -- 12.6. Conclusion -- 12.7. Acknowledgments -- 12.8. References -- List of Authors -- Index -- EULA.

Methods for Health', coordinated by Hélène Ratiney and Olivier Beuf, explores the fundamental principles and advanced techniques used in Magnetic Resonance Imaging (MRI). It covers topics such as the principles of MRI, hardware components, magnetization, excitation, signal-to-noise ratio, and spatial localization. The book also delves into the theoretical principles and practical guidelines of coils, fast imaging, acceleration techniques, and diffusion MRI. It serves as a comprehensive resource for professionals and researchers in the field of medical imaging, providing insights into the latest advancements and challenges in MRI technology.
