Sommario/riassunto	This volume is a Nordic contribution to research on law and humanities. It treats the legal culture of the Nordic countries through intensive analyses of canonical Nordic artworks. Law and justice have always been important issues in Nordic literature, film and theater from the Icelandic sagas through Ludvig Holberg and Henrik Ibsen to Lars Norén's theatre and Lars von Trier's Dogme films of today. This book

strives to answer two fundamental questions: Is there a special Nordic justice? And what does the legal and literary/aesthetic culture of the North mean for the concept of law and justice and for the understanding of the interdisciplinary exchange of law and humanities? The concept of law and literature as a research area was originally developed in countries of common law. This book investigates law and humanities from a different legal tradition, and contributes thus both to the discussion of the general and the comparative studies of law and humanities.

Sommario/riassunto

Published by the American Geophysical Union as part of the Geophysical Monograph Series, Volume 178. Hydrothermal systems at oceanic spreading centers reflect the complex interactions among transport, cooling and crystallization of magma, fluid circulation in the crust, tectonic processes, water-rock interaction, and the utilization of hydrothermal fluids as a metabolic energy source by microbial and macro-biological ecosystems. The development of mathematical and numerical models that address these complex linkages is a fundamental part the RIDGE 2000 program that attempts to quant
