

1. Record Nr.	UNINA9911019754803321
Titolo	Hydrogen bonding in organic synthesis // edited by Petri M. Pihko
Pubbl/distr/stampa	Weinheim, : Wiley-VCH, 2009
ISBN	9786612302497 9781282302495 1282302493 9783527627844 3527627847 9783527627851 3527627855
Descrizione fisica	1 online resource (397 p.)
Altri autori (Persone)	PihkoPetri M
Disciplina	541.224 547.2
Soggetti	Hydrogen bonding Organic compounds - Synthesis
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Description based upon print version of record.
Nota di bibliografia	Includes bibliographical references and index.
Nota di contenuto	Hydrogen Bonding in Organic Synthesis; Contents; Preface; List of Contributors; 1: Introduction; 1.1 Introduction; 1.2 Hydrogen Bonding in Organic Synthesis; 2: Hydrogen-Bond Catalysis or Brønsted-Acid Catalysis? General Considerations; 2.1 Introduction; 2.2 What is the Hydrogen Bond?; 2.3 Hydrogen-Bond Catalysis or Brønsted-Acid Catalysis; 2.4 Brønsted-Acid Catalysis; 2.5 Hydrogen-Bond Catalysis; References; 3: Computational Studies of Organocatalytic Processes Based on Hydrogen Bonding; 3.1 Introduction; 3.1.1 Catalytic Functions of Hydrogen Bonds 3.2 Dynamic Kinetic Resolution (DKR) of Azlactones-Thioureas Can Act as Oxyanion Holes Comparable to Serine Hydrolases3.2.1 The Calculated Reaction Path of the Alcoholytic Ring Opening of Azlactones; 3.2.2 How Hydrogen Bonds Determine the Enantioselectivity of the Alcoholytic Azlactone Opening; 3.3 On the Bifunctionality of Chiral Thiourea-Tert-Amine-Based Organocatalysts: Competing Routes to C-

C Bond Formation in a Michael Addition; 3.4 Dramatic Acceleration of Olefin Epoxidation in Fluorinated Alcohols: Activation of Hydrogen Peroxide by Multiple Hydrogen Bond Networks
3.4.1 Hydrogen Bond Donor Features of HFIP 3.4.2 The Catalytic Activity of HFIP in the Epoxidation Reaction; 3.5 TADDOL-Promoted Enantioselective Hetero-Diels-Alder Reaction of Danishefsky's Diene with Benzaldehyde-Another Example for Catalysis by Cooperative Hydrogen Bonding; 3.6 Epilog; References; 4: Oxyanion Holes and Their Mimics; 4.1 Introduction; 4.1.1 What are Oxyanion Holes?; 4.1.2 Contributions of Oxyanion Holes to Catalysis; 4.1.3 Properties of Hydrogen Bonds of Oxyanion Holes; 4.2 A More Detailed Description of the Two Classes of Oxyanion Holes in Enzymes
4.2.1 A Historical Perspective 4.2.2 Oxyanion Holes with Tetrahedral Intermediates; 4.2.3 Oxyanion Holes with Enolate Intermediates; 4.2.3.1 Examples of Enolate Oxyanion Holes; 4.3 Oxyanion Hole Mimics; 4.3.1 Mimics of Enzymatic Oxyanion Holes and Similar Systems; 4.3.2 Utilization of Oxyanion Holes in Enzymes for Other Reactions; 4.4 Concluding Remarks; Acknowledgments; References; 5: Brønsted Acids, H-Bond Donors, and Combined Acid Systems in Asymmetric Catalysis; 5.1 Introduction; 5.2 Brønsted Acid (Phosphoric Acid and Derivatives); 5.2.1 Binaphthylphosphoric Acids; 5.2.1.1 Mannich Reaction
5.2.1.2 Hydrophosphonylation 5.2.1.3 Friedel-Crafts; 5.2.1.4 Diels-Alder; 5.2.1.5 Miscellaneous Reactions; 5.2.1.6 Nonimine Electrophiles; 5.2.1.7 Transfer Hydrogenation; 5.2.2 Nonbinol-Based Phosphoric Acids; 5.2.3 N-Triflyl Phosphoramidate; 5.2.4 Asymmetric Counteranion-Directed Catalysis; 5.3 N-H Hydrogen Bond Catalysts; 5.3.1 Guanidine Organic Base; 5.3.2 Ammonium Salt Catalysis; 5.3.3 Chiral Tetraaminophosphonium Salt; 5.4 Combined Acid Catalysis; 5.4.1 Brønsted-Acid-Assisted Brønsted Acid Catalysis; 5.4.1.1 Diol Activation of Carbonyl Electrophiles
5.4.1.2 Diol Activation of Other Electrophiles

Sommario/riassunto

This first comprehensive overview of the rapidly growing field emphasizes the use of hydrogen bonding as a tool for organic synthesis, especially catalysis. As such, it covers such topics as enzyme chemistry, organocatalysis and total synthesis, all unified by the unique advantages of hydrogen bonding in the construction of complex molecules from simple precursors. Providing everything you need to know, this is a definite must for every synthetic chemist in academia and industry.
