Economic and legal aspects -- 5.2. References -- Chapter 6. Treatment Technologies -- 6.1. Use of raw wastewater -- 6.2. Bases of the treatment process concept -- 6.3. References -- Chapter 7. Tertiary Filtration -- 7.1. Gravity filtration without reagents -- 7.1.1. Rapid filters and high-rate filters (HRF) -- 7.1.2. Dual-media filters -- 7.1.3. Pressure filters -- 7.2. Gravity filtration with reagents -- 7.3. Filtration mechanisms -- 7.4. Implementation parameters -- 7.4.1. Media -- 7.4.2. Media height ratio/d<sub>10</sub> -- 7.4.3. Effective size ratio -- 7.5. Size parameters: filtration rate and media height -- 7.5.1. Filter depth modelling -- 7.6. Operating parameters -- 7.6.1. Pressure drop in a clean filter -- 7.6.2. Retention capacity -- 7.6.3. Filter backwashing conditions -- 7.7. Filtration technologies -- 7.7.1. Conventional single-layer filters -- 7.7.2. High-rate filters -- 7.7.3. Example of tertiary filtration design on single-media filter -- 7.7.4. Dual-media filters -- 7.7.5. Filters under pressure -- 7.7.6. Performances of gravity filters -- 7.8. Mobile material filters -- 7.9. Rotary drum filters -- 7.9.1. Hydrotech filter characteristics -- 7.10. References -- Chapter 8. Disinfection -- 8.1. Microorganisms present in treated wastewater -- 8.1.1. Bacteria -- 8.1.2. Viruses -- 8.1.3. Parasites -- 8.2. General rules of chemical disinfection -- 8.2.1. Mode of action of chemical disinfectants in treated wastewater -- 8.2.2. Reduction principle of the number of germs - "Log" units.  
8.3. Factors influencing the effectiveness of chemical disinfection -- 8.3.1. Turbidity -- 8.3.2. Presence of oxidizable matter -- 8.3.3. Injection mode and point -- 8.3.4. Design of the contact tank -- 8.4. Qualities of a good disinfectant -- 8.5. The main techniques of wastewater chemical disinfection -- 8.5.1. Chlorine disinfection -- 8.5.2. Chlorine dioxide disinfection -- 8.5.3. Chloramination -- 8.6. Disinfection with ozone -- 8.6.1. General information on ozone -- 8.6.2. Preparation and implementation of ozone -- 8.6.3. Transfer of ozone in water to be treated -- 8.6.4. Performance of disinfection with ozone -- 8.7. Organic peracids: performic acid and peracetic acid -- 8.7.1. Production organic peracids -- 8.7.2. Disinfection and oxidation mechanisms of organic peracids -- 8.7.3. Performic acid -- 8.7.4. Peracetic acid -- 8.7.5. Degradation kinetics of peracids -- 8.7.6. Primary, secondary and tertiary wastewater applications -- 8.8. UV disinfection -- 8.8.1. General information on UV radiation -- 8.8.2. Inactivation mechanisms -- 8.8.3. Lethal dose and inactivation kinetics -- 8.8.4. Implementation -- 8.8.5. Sizing parameters -- 8.8.6. Factors influencing UV treatment efficiency -- 8.8.7. Performance -- 8.8.8. UV disinfection advantages and disadvantages in wastewater -- 8.9.

Sommario/riassunto

Water issues are inextricably linked to sustainable development since water must meet the needs of present and future generations. The reuse of wastewater is a socioeconomic challenge for the development of drinking water and wastewater services. It has the following advantages: it increases usable water resources, preserves natural resources and alleviates water shortages caused by climate change. Wastewater Reuse 1 provides a comprehensive and educational overview of the many ways wastewater can be reused, the variety of treatments, their performance, their conditions of use and how to combine them to give wastewater a new lease on life. Droughts are already a concern in many parts of the world; however, we now have new technologies to rely on.
