Lingua di pubblicazione Inglese **Formato** Materiale a stampa Monografia Livello bibliografico Nota di bibliografia Includes bibliographical references and index. Nota di contenuto pt. 1. Central nervous system disorders -- pt. 2. Seizures -- pt. 3. Conditions of prolonged unresponsiveness -- pt. 4. Peripheral nervous system disease -- pt. 5. The casebook of clinical/neurophysiology consults. Bridging the clinical electrophysiological investigation with the Sommario/riassunto neurological consultation. Acutely ill patients present with symptoms that don't immediately yield a diagnosis. Electrophysiological testing can support diagnosis but only if the appropriate tests are ordered. They must be properly interpreted in conjunction with the actual symptoms. Clinical Electrophysiology presents a wide range of symptoms with specific electrophysiological results. The handbook shows how the complete picture leads to better diagnostic, prognostic or therapeutic conclusions. The book is organized by the presenting

neurological problem in a clinical setting. For each case the authors

provide a possible electrophysiological result. This is interpreted and tied to the patient's symptoms to yield a clinical solution. -- Wiley Online Library website.
