The 'Handbook of Palliative Care' is an essential resource for healthcare professionals involved in the provision of palliative care. Edited by experts from leading institutions, this fourth edition covers a comprehensive range of topics pertinent to palliative care, including the principles and practice of care, patient and public involvement, and equity in serious illness. It delves into specialized areas such as hospital and community palliative care, symptom management, and the care of specific populations including children and individuals with mental illness. The book aims to enhance the skills and knowledge of practitioners by integrating new perspectives on loss, grief, and ethical considerations. It also addresses the emotional impact of palliative care work and carer wellbeing.
