

1. Record Nr.	UNINA9911020169603321
Titolo	Clostridia : biotechnology and medical applications
Pubbl/distr/stampa	[Place of publication not identified], : Wiley VCH, 2001
ISBN	9786610557547 9781280557545 1280557540 9783527600106 3527600108
Descrizione fisica	1 online resource (286 pages)
Disciplina	579.3/64
Soggetti	Clostridium - Biotechnology Clostridium Biotechnology Bacteria, Anaerobic
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Bibliographic Level Mode of Issuance: Monograph
Sommario/riassunto	Clostridia have a high biotechnological potential, although they are generally still regarded more as a group of pathogenic microorganisms. They undertake a broad variety of biocatalytic reactions some of which are unique and of use in the chemical and biotechnology industry for the production of chemicals or for biopharmaceutical purposes. Even some of the clostridial toxins are of medical relevance and can be used as therapeutic agents; The book presents the biology, pyhsiology, and genetics, including genome projects of Clostridia and highlights their potential for industrial and medical applications. It is mostly based on research during the last decade which has brought significant progress in the field and outlines future perspectives of industrial interest.
