

1. Record Nr.	UNINA9911020273903321
Autore	Hao Liang
Titolo	Laser surface treatment of bio-implant materials
Pubbl/distr/stampa	[Place of publication not identified], : Wiley, 2005
ISBN	0-470-03397-5 1-60119-500-1
Disciplina	610/.28/4
Soggetti	Biomedical materials - Effect of lasers on Biomedical materials - Biocompatibility Investigative Techniques Biomedical and Dental Materials Optical Devices Therapeutics Ablation Techniques Radiation Equipment and Supplies Equipment and Supplies Manufactured Materials Surgical Procedures, Operative Chemicals and Drugs Analytical, Diagnostic and Therapeutic Techniques and Equipment Specialty Uses of Chemicals Chemical Actions and Uses Technology, Industry, and Agriculture Technology, Industry, Agriculture Biocompatible Materials Laser Therapy Methods Lasers Health & Biological Sciences Biomedical Engineering
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Bibliographic Level Mode of Issuance: Monograph

Nota di contenuto

Bioactivity and biointegration of orthopaedic and dental implants --
Surface modification of biomaterials -- Wettability in biomaterials
science and modification techniques -- CO2 laser modification of the
wettability characteristics of magnesia partially stabilised zirconia -- In
vitro biocompatibility evaluation of CO2 laser treated magnesia partially
stabilised zirconia -- The effects of CO2 laser radiation on the
wettability characteristics of a titanium alloy -- In vitro biocompatibility
evaluation of CO2 laser treated titanium alloy -- Enquiry into the
possible generic effects of the CO2 laser treatment on bone implant
biomaterials.
