	Note generali	Description based upon print version of record.
	Sommario/riassunto	This scholarly work explores the philosophical and pedagogical methods of Boethius, a late antique thinker, focusing on the transfer and development of epistemic concepts from antiquity to the early

modern period. It examines Boethius' contributions to the theory of knowledge, ethics, logic, language, and the soul, as well as the didactic strategies employed in his writings. The book also situates these ideas within broader historical and cultural contexts, emphasizing their dynamic and evolving nature. Intended for researchers and students of philosophy, classical studies, and intellectual history, it sheds light on the interplay between tradition and innovation in premodern knowledge systems.
