

1. Record Nr.	UNINA9911022370603321
Autore	Agarwal Ramesh K
Titolo	Manufacturing, Machining and Forming of Engineering Materials
Pubbl/distr/stampa	Zurich : , : Trans Tech Publications, Limited, , 2025 ©2025
ISBN	3-0364-1846-6
Edizione	[1st ed.]
Descrizione fisica	1 online resource (135 pages)
Altri autori (Persone)	CsüllögMihály ShimJae-Jin HuJong Wan
Soggetti	Materials science Additive manufacturing
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Nota di contenuto	Manufacturing, Machining and Forming of Engineering Materials -- Preface -- Table of Contents -- Chapter 1: Machining and Forming -- Analysis of Grinding Technology of Spiroid Worm on a Classical Grinding Machine -- Dependence of Quality and Productivity on the Type of Wire Electrode in WEDM of HSS -- Evaluation of Thickness Distribution during Single Point Incremental Forming of Pure Aluminum Alloy Al1050 -- Chapter 2: Additive Manufacturing -- On the Impact of Process Parameters and Ambient Temperature on Tensile Strength and Fatigue Behaviour of SLS-Built Polyamide-12 -- Evaluation of Tensile Behavior of 3D-Printed Fiberglass-Reinforced Nylon Composites -- Optimization of Strength & Roughness for Vapor Smoothened FDM Fabricated PLA Parts through Exposure Time and Temperature -- Characterization of Cellulose Nanocrystals (CNC) and its Reinforcing Impact as an Additive for PLA-TPU 3D Printing Filament -- Chapter 3: Materials for Biomedical Applications -- A Kinetic Study on Starch Digestibility and Polyphenol Release of Different Physically Modified Riceberry Flours during In Vitro Stimulated Gastrointestinal Digestion -- Ibuprofen-Loaded PEGDMA/CNS Nanocomposite Hydrogels: A Drug Release Study -- Chapter 4: Engineering of Technological Machines and Equipment -- 3D Printed

Connection System for Bamboo Structure Construction -- CAD
Modelling and 3D Scanning of the Elements of the Wire Bending
Mechanical Machine -- CAD Modeling and Surface Roughness
Measurement of the Gear Pair in the Wire Bending Machine -- Chapter
5: Green Building Materials -- Improving the Properties of the
Masonry Produced Using Hemp Stalk with Bark Fibre to Meet Standard
Strength and Properties of Energy Conserving Construction Material --
Microstructure and Engineering Properties of New and Aged Bamboo as
a Construction Material: The Effects of Borax/Boric Solution Treatment
-- Enhancing Hempcrete and Hemp Concrete Properties through
Surface Treatment and Additives -- Investigation of Optimal Ratios of
EPS Foam Waste and Solvents as Alternative Green Polymer-Based
Additives for Enhancing Cement Properties -- Estimating the
Parameters of a Structure by Using its Dynamic Response: A Study
Based on a Cantilever Beam -- Keyword Index -- Author Index
Special topic volume with invited peer-reviewed papers only.

Sommario/riassunto
