Sommario/riassunto	This scholarly work examines the origins and development of provincial deputations in the Hispanic world during the period 1812-1824. It explores the political, administrative, and territorial transformations influenced by federalism, centralism, and revolutionary movements in Spanish America and Spain. The book provides a comparative analysis of provincial governance structures, emphasizing the relationship between local autonomy and broader national frameworks. Through historical essays from multiple contributors, it addresses topics such as the Constitution of Cádiz, the transition from monarchy to republics, and the role of provincial deputations in shaping modern states. Designed for historians, political scientists, and scholars of Latin American studies, the text is grounded in rigorous research and offers insights into the interplay between local governance and national identity formation during a pivotal era in history.
