

1. Record Nr.	UNINA9911026125403321
Autore	Choy Kwangchul
Titolo	Burstone's Biomechanical Foundation of Clinical Orthodontics // Kwangchul Choy
Pubbl/distr/stampa	Batavia : , : Quintessence Publishing Company, Incorporated, , 2022 ©2022
ISBN	9781647241452 1647241456 9781647241445 1647241448
Edizione	[2nd ed.]
Descrizione fisica	1 online resource (519 pages)
Disciplina	617.6/43
Soggetti	Orthodontics Biomechanics Orthodontics, Corrective Orthodontic appliances Biomechanical Phenomena Orthodontic Appliances Malocclusion - therapy Orthodontic Appliance Design
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Nota di contenuto	Burstone's Biomechanical Foundation of Clinical Orthodontics, 2nd Edition -- Frontmatter -- Library of Congress Cataloging-in-Publication Data -- Contents -- Preface to the Second Edition -- Acknowledgments -- Preface to the First Edition -- Contributors -- A Color Code Convention for Forces -- PART I: The Basics and Single-Force Appliances -- Chapter 1: Why We Need Biomechanics -- Scientific Biomechanics -- Optimization of Tooth Movement and Anchorage -- Selecting or Designing a New Appliance -- Research and Evaluation of Treatment Results -- How Scientific Terminology Helps -- Knowledge Transfer Among Appliances -- Advantages of Biomechanical Knowledge -- Chapter 2: Concurrent Force Systems -- The Field of Mechanics --

Characteristics of a Force -- Manipulating Forces -- Clinical Applications -- Summary -- Recommended Reading -- Problems -- Chapter 3: Nonconcurrent Force Systems and Forces on a Free Body -- Determining the Magnitude and Direction of the Resultant -- Moments and Couples -- Determining the Point of Force Application of the Resultant -- Equivalence of Forces -- 2D Projections of 3D Force Systems -- Recommended Reading -- Problems -- Chapter 4: Headgear -- Inner and Outer Bow Headgear from the Lateral View -- Typical Headgear Designs -- Headgears Acting on a Full Arch -- How to Design a Headgear -- Altering the Cant of the Occlusal Plane with the Headgear -- Clinical Monitoring and Corrective Action -- Inner and Outer Bow Headgear from the Occlusal View -- Inner and Outer Bow Headgear from the Frontal View -- J-Hook Headgear -- Protraction Headgear -- Recommended Reading -- Problems -- Chapter 5: The Creative Use of Maxillo mandibular Elastics -- What Does a Class II or Class III Elastic Do? -- Synchronous Class II Elastics -- Asynchronous Class II Elastics -- Nonrigid Arches with Third-OrderPlay -- Lateral or Crisscross Elastics.

Vertical Elastics -- Subdivision Elastics -- Segmental Elastics -- Elastic Redundancy -- Common Side Effects withMaxillomandibular Elastics -- Using Class II Elastics andHeadgear Simultaneously -- Recommended Reading -- Problems -- Chapter 6: Single Forces and Deep Bite Correction by Intrusion -- Can Teeth Be Intruded? -- Continuous Intrusion Arch -- Global Characteristics of the Intrusion Force System -- Changing the Point of Force Application -- Three-Piece Intrusion Arch -- Altering Force Direction -- Avoiding Initial Leveling Arches -- Special Anchorage Considerations -- References -- Recommended Reading -- Problems -- Chapter 7: Deep Bite Correction by Posterior Extrusion -- Type I Posterior Extrusion -- Type II Posterior Extrusion -- Curves and Reverse Curvesof Spee -- Reference -- Recommended Reading -- Problems -- Chapter 8: Equilibrium -- Free-Body Diagram -- Types of Support and Number ofReactions -- Basic Concepts and Formulas ofEquilibrium -- Solving Problems UsingEquilibrium -- Equilibrium and Equivalence -- Equilibrium and CreativeBiomechanics -- Conclusion -- Recommended Reading -- Problems -- PART II: The Biomechanics of Tooth Movement -- Chapter 9: The Biomechanics of Altering Tooth Position -- Free and Restrained Bodies -- Methods to Describe Change ofTooth Position -- Force Systems and ToothMovement -- Primary Tooth Movement -- Derived Tooth Movement -- Force Systems at the Bracket -- A Couple or Single Force at the Bracket for Rotation Near the CR -- When a Force and a Couple Are Required for Tipping -- Characteristics of an OptimalForce System -- References -- Recommended Reading -- Problems -- Chapter 10: 3D Concepts in Tooth Movement -- Origins of a Tooth-MovementReference -- Scienti[~]c Development of theConcept of Center of Resistance -- References -- Chapter 11: Orthodontic Anchorage. Definition and Clinical Perceptionof Anchorage -- Rationale for Anchorage froma Basic Science Perspective -- Anchorage Values Accordingto PDL Stress -- Clinical Intraoral AnchorageStrategies -- Degrees of Freedom and theBiomechanical Basis of IntraoralAnchorage Devices -- References -- Recommended Reading -- PART III: Advanced ApplianceTherapy -- Chapter 12: Lingual Arches -- Limitations of a Labial Appliance -- Attachments -- Lingual Arch Configurations -- Shape-Driven Method -- Force-Driven Method -- Symmetric Applications -- Asymmetric Applications -- Summary -- References -- Recommended Reading -- Problems -- Chapter 13: ExtractionTherapies and Space Closure -- Differential Space Closure -- Strategies for Maintaining PosteriorMolar Position: Group A Mechanics

-- En Masse Versus Separate CanineRetraction -- Continuous Versus SegmentedArches -- Friction (Sliding) Mechanics -- Frictionless (Loop) Mechanics -- Statically Determinate SpaceClosure Appliances -- Statically Indeterminate SpringDesign -- Effect of Shape and Dimension onSpring Properties -- T-Loop Moments -- Differential Space Closure with aT-Loop Spring -- Separate Canine Retraction -- Canine Bypass Archwire andCanine Root Spring -- Incisor Root Movement -- Two-Phase Space Closure -- Summary -- References -- Recommended Reading -- Problems -- Chapter 14: Forces from Wires and Brackets -- Forces from a Straight Wire in Malaligned Brackets -- Ideal Modeling of Two-Bracket (Tooth) Segments -- Geometry Classi~cation andDetermination -- Bracket Geometries as aContinuum -- Additional Methods forVisualization of Geometries -- Bent Wires and the Six Geometries -- Consistency and Inconsistency -- Three-Bracket Segments -- Making Bends Creatively inContinuous Archwires -- Clinical Applications ofTwo-Bracket Geometries -- Summary -- Recommended Reading -- Problems.

Chapter 15: Principles of Statically Determinate Appliances and Creative Mechanics -- Principles of Statically Determinate Appliances -- Cantilevers -- Closed Coil Springs and Elastics -- Two-Vector Mechanics -- 3D Problems -- References -- Recommended Reading -- PART IV: Advanced Mechanics of Materials -- Chapter 16: The Role of Friction in Orthodontic Appliances -- Frictional Forces, Their Origin, and Classic Formulas -- Source of Normal Forces -- Canine Retraction -- Torque and Friction -- Bracket Design and Friction -- Is Friction Always Bad? -- Overriding Friction -- Occlusal Forces, Vibration, and Friction -- Friction and Anatomical Variation -- Anchorage and Friction -- Reducing Friction During SpaceClosure -- Friction During Initial Alignmentand Finishing -- Conclusion -- References -- Recommended Reading -- Problems -- Chapter 17: Properties and Structures of Orthodontic Wire Materials -- Mechanical Behavior and Relationships -- Crystal Structure and PhaseTransitions -- Composition and Properties ofOrthodontic Alloys -- Microstructural Mechanisms ThatDetermine Mechanical Properties -- Materials for High Esthetics andBiomechanical Performance -- References -- Recommended Reading -- Chapter 18: How to Select an Archwire -- The Triad Characteristics -- Force-Deflection Rate -- Maximum Force and MaximumBending Moment -- Maximum Deflection -- Other Wire Properties -- Wire Stiffness Numbers -- Relative Torque (Torsion) Numbers -- Recommended Reading -- Problems -- PART V: Appendices -- Hints for Developing Useful Force Diagrams -- Floating Forces -- Arrows That Are Not Forces -- Equivalent Force Diagrams -- Equilibrium Diagrams -- Confusing Activation andDeactivation Forces -- It Is the Line of Force That Counts -- Equivalence: Replacing a Forcewith a Force and a Couple -- Conclusion -- Glossary -- Solutions to Problems -- Bender's Tool Kit -- Index.
