

1. Record Nr.	UNINA9911031562603321
Autore	Albatici Rossano
Titolo	Envisioning the Futures - Designing and Building for People and the Environment : Proceedings of Colloqui.AT.e 2025, Volume 1 // edited by Rossano Albatici, Michela Dalprà, Maria Paola Gatti, Gianluca Maracchini, Simone Torresin
Pubbl/distr/stampa	Cham : , : Springer Nature Switzerland : , : Imprint : Springer, , 2025
ISBN	3-032-06974-2
Edizione	[1st ed. 2025.]
Descrizione fisica	1 online resource (832 pages)
Collana	Lecture Notes in Civil Engineering, , 2366-2565 ; ; 764
Altri autori (Persone)	DalpràMichela GattiMaria Paola MaracchiniGianluca TorresinSimone
Disciplina	690
Soggetti	Buildings - Design and construction Cultural property Archaeology Application software Building Construction and Design Heritage Management Computer and Information Systems Applications
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Nota di contenuto	Transitional architectures. A response to contemporary needs in rural areas of Sardinia -- Digitalization and analysis of fragile and inaccessible architectural heritage: the case study of Masseria del Cristo in Matera, Italy -- Investigating the use of augmented reality and BIM for architectural heritage: a systematic review -- A large industrial building in the historic centre. Refurbishment and reuse of the Capra distilleries in Quartu Sant'Elena -- Prefabricated construction systems for social housing in the Florentine area -- Universities, student housings and cities: a network for innovation and development.
Sommario/riassunto	This book gathers the proceedings of the 12th International Conference of Ar.Tec. (Scientific Society of Architectural Engineering), Colloqui.AT.

e, which was held in Trento, Italy on June 11–14, 2025, and brought together scholars in the fields of construction and conservation history, building construction and performance, building design, and technologies. Digital transition and design of 4.0 buildings, digital twins for the management of historical building heritage, building-human-environment relationships, and mitigation of vulnerabilities for the preservation of the built environment are also explored. The contributions demonstrate that architectural engineering enables the construction of sustainable, resilient, adaptive, and high-performance buildings, and as such is instrumental in fighting against climate change.
