

1. Record Nr.	UNINA9911034862103321
Autore	Albatici Rossano
Titolo	Envisioning the Futures - Designing and Building for People and the Environment : Proceedings of Colloqui.AT.e 2025, Volume 3 // edited by Rossano Albatici, Michela Dalprà, Maria Paola Gatti, Gianluca Maracchini, Simone Torresin
Pubbl/distr/stampa	Cham : , : Springer Nature Switzerland : , : Imprint : Springer, , 2025
ISBN	3-032-06993-9
Edizione	[1st ed. 2025.]
Descrizione fisica	1 online resource (1221 pages)
Collana	Lecture Notes in Civil Engineering, , 2366-2565 ; ; 766
Altri autori (Persone)	DalpràMichela GattiMaria Paola MaracchiniGianluca TorresinSimone
Disciplina	690
Soggetti	Buildings - Design and construction Cultural property Archaeology Application software Building Construction and Design Heritage Management Computer and Information Systems Applications
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Nota di contenuto	Open BIM for the Gran Sasso National Laboratory. Integration of ISO 81346 reference designation system in IFC for the Bellotti Ion Beam Facility -- Towards the digital twin of a deep underground laboratory. The information modelling of the LNGS experiment facilities -- Material passports in AEC sector: critical success factors and Issuing protocol towards standardization -- Life cycle analysis of innovative cement-based materials using stone waste: state of the art and opportunities for Apricena Marmettola -- Designing adaptive shading components for 4D printing.
Sommario/riassunto	This book gathers the proceedings of the 12th International Conference of Ar.Tec. (Scientific Society of Architectural Engineering), Colloqui.AT.

e, which was held in Trento, Italy on June 11–14, 2025, and brought together scholars in the fields of construction and conservation history, building construction and performance, building design, and technologies. Digital transition and design of 4.0 buildings, digital twins for the management of historical building heritage, building-human-environment relationships, and mitigation of vulnerabilities for the preservation of the built environment are also explored. The contributions demonstrate that architectural engineering enables the construction of sustainable, resilient, adaptive, and high-performance buildings, and as such is instrumental in fighting against climate change.
