

1. Record Nr.	UNINA9911045225503321
Autore	Stachowiak Gwidon
Titolo	Engineering Tribology
Pubbl/distr/stampa	Chantilly : , : Elsevier Science & Technology, , 2025 ©2026
ISBN	9780443341502 0443341508
Edizione	[5th ed.]
Descrizione fisica	1 online resource (903 pages)
Altri autori (Persone)	BatchelorA. W (Andrew W.)
Disciplina	621.89
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Nota di contenuto	Cover -- ENGINEERING TRIBOLOGY -- Copyright -- Dedication -- Contents -- Preface -- Acknowledgements -- 1 INTRODUCTION -- 1.1 Background -- 1.2 Meaning of tribology -- Lubrication -- Wear -- 1.3 Cost of friction and wear -- 1.4 Summary -- Revision questions -- References -- 2 PHYSICAL PROPERTIES OF LUBRICANTS -- 2.1 Introduction -- 2.2 Oil viscosity -- Dynamic viscosity -- Kinematic viscosity -- 2.3 Viscosity temperature relationship -- Viscosity-temperature equations -- Viscosity-temperature chart -- 2.4 Viscosity index -- 2.5 Viscosity pressure relationship -- 2.6 Viscosity-shear rate relationship -- Pseudoplastic behavior -- Thixotropic behavior -- 2.7 Viscosity measurements -- Capillary viscometers -- Rotational viscometers -- Rotating cylinder viscometer -- Cone on plate viscometer -- Other viscometers -- 2.8 Viscosity of mixtures -- 2.9 Oil viscosity classification -- SAE viscosity classification -- ISO viscosity classification -- 2.10 Lubricant density and specific gravity -- 2.11 Thermal properties of lubricants -- Specific heat -- Thermal conductivity -- Thermal diffusivity -- 2.12 Temperature characteristics of lubricants -- Pour point and cloud point -- Flash point and fire point -- Volatility and evaporation -- Oxidation stability -- Thermal stability -- 2.13 Other lubricant characteristics -- Surface tension -- Neutralization number -- Carbon residue -- 2.14 Optical properties of lubricants -- Refractive index -- 2.15 Additive compatibility and

solubility -- Additive compatibility -- Additive solubility -- 2.16
Electrical properties of lubricants -- 2.17 Lubricant impurities and
contaminants -- Water content -- Sulphur content -- Ash content --
Chlorine content -- 2.18 Solubility of gases in oils -- 2.19 Summary --
Revision questions -- References -- 3 LUBRICANTS AND THEIR
COMPOSITION -- 3.1 Introduction -- 3.2 Mineral oils.
Sources of mineral oilsSources of mineral oils -- Manufacture of
mineral oils -- Types of mineral oils -- Chemical forms -- Sulphur
content -- Viscosity -- 3.3 Synthetic oils -- Manufacturing of synthetic
oils -- Hydrocarbon synthetic lubricants -- Polyalphaolefins --
Polyphenyl ethers -- Esters -- Cycloaliphatics -- Polyglycols -- Silicon
analogues of hydrocarbons -- Silicones -- Silahydrocarbons --
Organohalogens -- Perfluoropolyethers -- Chlorofluorocarbons --
Chlorotrifluoroethylenes -- Perfluoropolyalkylethers --
Cyclophosphazenes -- 3.4 New developments in synthetic lubricants
-- Ionic liquid lubricants -- Mesogenic lubricants -- 3.5 Emulsions and
aqueous lubricants -- Manufacturing of emulsions -- Characteristics
-- Applications -- Polyelectrolyte lubricants -- 3.6 Greases --
Manufacturing of greases -- Composition -- Base oils -- Thickener --
Additives -- Fillers -- Lubrication mechanism of greases -- Grease
characteristics -- Consistency of greases -- Mechanical stability --
Drop point -- Oxidation stability -- Thermal stability -- Evaporation
loss -- Grease viscosity characteristics -- Classification of greases --
Grease compatibility -- Degradation of greases -- 3.7 Lubricant
additives -- Wear and friction improvers -- Adsorption or boundary
additives -- Antiwear additives -- Extreme-pressure additives --
Nanoparticle additives -- Anti-oxidants -- Oil oxidation -- Oxidation
inhibitors -- Corrosion control additives -- Contamination control
additives -- Viscosity improvers -- Pour point depressants -- Foam
inhibitors -- Interference between additives -- 3.8 Summary --
Revision questions -- References -- 4 HYDRODYNAMIC LUBRICATION
-- 4.1 Introduction -- 4.2 Reynolds equation -- Simplifying
assumptions -- Equilibrium of an element -- Continuity of flow in a
column -- Simplifications to the Reynolds equation.
Unidirectional velocity approximation -- Steady film thickness
approximation -- Isoviscous approximation -- Infinitely long bearing
approximation -- Narrow bearing approximation -- Bearing
parameters predicted from Reynolds equation -- Pressure distribution
-- Load capacity -- Friction force -- Coefficient of friction -- Lubricant
flow -- Summary -- 4.3 Pad bearings -- Infinite linear pad bearing --
Bearing geometry -- Pressure distribution -- Load capacity -- Friction
force -- Coefficient of friction -- Lubricant flow rate -- Infinite
Rayleigh step bearing -- Other wedge geometries of infinite pad
bearings -- Tapered land wedge -- Parabolic wedge -- Parallel surface
bearings -- Spiral groove bearing -- Bearings with surface textures --
Finite pad bearings -- Pivoted pad bearing -- Inlet boundary conditions
in pad bearing analysis -- 4.4 Converging-diverging wedges -- Bearing
geometry -- Pressure distribution -- Full-Sommerfeld boundary
condition -- Half-Sommerfeld boundary condition -- Reynolds
boundary condition -- Load capacity -- 4.5 Journal bearings --
Evaluation of the main parameters -- Bearing geometry -- Pressure
distribution -- Load capacity -- Friction force -- Coefficient of friction
-- Lubricant flow rate -- Practical and operational aspects of journal
bearings -- Lubricant supply -- Cavitation -- Journal bearings with
movable pads -- Journal bearings incorporating a Rayleigh step -- Oil
whirl or lubricant caused vibration -- Rotating load -- Tilted shafts --
Partial bearings -- Elastic deformation of the bearing -- Infinitely long
approximation in journal bearings -- 4.6 Thermal effects in bearings

-- Heat transfer mechanisms in bearings -- Conduction -- Convection
 -- Conducted/convected heat ratio -- Isoviscous thermal analysis of bearings -- Iterative method -- Constant flow method.
 Non-isoviscous thermal analysis of bearings with locally varying viscosity -- Multiple regression in bearing analysis -- Bearing inlet temperature and thermal interaction between pads of a Michell bearing
 -- 4.7 Limits of hydrodynamic lubrication -- 4.8 Hydrodynamic lubrication with non-Newtonian fluids -- Turbulence and hydrodynamic lubrication -- Hydrodynamic lubrication with non-Newtonian lubricants -- Inertia effects in hydrodynamics -- Compressible fluids -- Compressible hydrodynamic lubrication in gas bearings -- 4.9 Reynolds equation for squeeze films -- Pressure distribution -- Load capacity -- Squeeze time -- Cavitation and squeeze films -- Microscopic squeeze film effects between rough sliding surfaces -- 4.10 Porous bearings -- 4.11 Summary -- Revision questions -- References -- 5 COMPUTATIONAL HYDRODYNAMICS -- 5.1 Introduction -- 5.2 Non-dimensionalization of the Reynolds equation -- 5.3 The Vogelpohl parameter -- 5.4 Finite difference equivalent of the Reynolds equation -- Definition of solution domain and boundary conditions -- Calculation of pressure field -- Calculation of dimensionless friction force and friction coefficient -- Numerical solution technique for Vogelpohl equation -- 5.5 Numerical analysis of hydrodynamic lubrication in idealized journal and partial arc bearings -- Example of data from numerical analysis, the effect of shaft misalignment -- 5.6 Numerical analysis of hydrodynamic lubrication in a real bearing -- 5.6.1 Thermohydrodynamic lubrication -- Governing equations and boundary conditions in thermohydrodynamic lubrication -- Governing equations in thermohydrodynamic lubrication for a one-dimensional bearing -- Thermohydrodynamic equations for the finite pad bearing -- Boundary conditions -- Finite difference equations for thermohydrodynamic lubrication.
 Treatment of boundary conditions in thermohydrodynamic lubrication -- Computer program for the analysis of an infinitely long pad bearing in the case of thermohydrodynamic lubrication -- Example of the analysis of an infinitely long pad bearing in the case of thermohydrodynamic lubrication -- 5.6.2 Elastic deformations in a pad bearing -- Computer program for the analysis of an elastically deforming onedimensional pivoted Michell pad bearing -- Effect of elastic deformation of the pad on load capacity and film thickness -- 5.6.3 Cavitation and film reformation in grooved journal bearings -- Computer program for the analysis of grooved 360° journal bearings -- Example of the analysis of a grooved 360° journal bearing -- 5.6.4 Vibrational stability in journal bearings -- Determination of stiffness and damping coefficients -- Computer program for the analysis of vibrational stability in a partial arc journal bearing -- Example of the analysis of vibrational stability in a partial arc journal bearing -- 5.7 Computational evaluation of cavitation effects in hydrodynamic bearings -- 5.8 Summary -- Revision questions -- References -- 6 HYDROSTATIC LUBRICATION -- 6.1 Introduction -- 6.2 Hydrostatic bearing analysis -- Flat circular hydrostatic pad bearing -- Pressure distribution -- Lubricant flow -- Load capacity -- Friction torque -- Friction power loss -- Non-flat circular hydrostatic pad bearings -- Pressure distribution -- Lubricant flow -- Load capacity -- Friction torque -- Friction power loss -- 6.3 Generalized approach to hydrostatic bearing analysis -- Flat circular pad bearings -- Flat square pad bearings -- 6.4 Optimization of hydrostatic bearing design -- Minimization of power -- Low-speed recessed bearings -- High-speed recessed bearings -- Control of lubricant film thickness and bearing

stiffness -- Stiffness with constant flow method.

Stiffness with capillary restrictors.

Sommario/riassunto

Engineering Tribology, Fifth Edition takes an interdisciplinary approach to key concepts and engineering implications of tribology, bringing together the relevant knowledge needed from different fields to achieve effective analysis and control of friction and wear.
