|-------------------------|---|
| 1. Record Nr. | UNIORUON00412381 |
| Autore | Riquer, Martín : de |
| Titolo | Guillem de Bergueda / M. de Riquer |
| Pubbl/distr/stampa | Espluga de Francoli, : Abadia de Poblet, 1971 |
| Descrizione fisica | 2v. : ill. ; 25 cm. |
| Soggetti | Filologia romanza - Studi |
| Lingua di pubblicazione | Spagnolo |
| Formato | Materiale a stampa |
| Livello bibliografico | Monografia |
| 2. Record Nr. | UNINA9911069526403321 |
| Autore | Pal Singh Jitendra |
| Titolo | Advancement in Oxide Utilization for Li Rechargeable Batteries |
| Pubbl/distr/stampa | Cambridge : , : Royal Society of Chemistry, The, , 2025
©2025 |
| ISBN | 1-83767-362-4
1-83767-361-6 |
| Edizione | [1st ed.] |
| Descrizione fisica | 1 online resource (353 pages) |
| Collana | Sustainable Energy Series ; ; v.Volume 3 |
| Altri autori (Persone) | LeeSangsul
FrangerSylvain
DixitAmbesh |
| Disciplina | 621.312424 |
| Soggetti | Lithium ion batteries
Metallic oxides |
| Lingua di pubblicazione | Inglese |
| Formato | Materiale a stampa |
| Livello bibliografico | Monografia |
| Nota di contenuto | Cover -- Copyright -- Preface -- Contents -- Section I: Introduction --
Chapter 1 Section I: Introduction -- 1.1 Introduction -- 1.2 Metal
Oxides in LIBs -- 1.2.1 Principles and Applications of LIBs -- 1.2.2 |

Electrodes Used in LIBs Consisting of Metal Oxide -- 1.2.2.1 Metal Oxide-based Anode Electrodes for LIBs -- 1.2.2.2 Thin Films on Metal Oxide Anodes -- 1.2.3 Metal Oxide-based Cathode Electrodes for LIBs -- 1.2.4 Lithium Transition Metal Oxide-based Cathodes -- 1.2.4.1 Surface Coatings of Li-rich Layered Oxide Cathodes -- 1.3 Improved Chemistry and Materials for Li-based Batteries -- 1.4 Conclusion -- Abbreviations -- References -- Chapter 2 Physics and Chemistry of Li-ion Rechargeable Batteries -- 2.1 Journey of Li-ion Batteries -- 2.2 LIB Components and Materials Selection Criteria -- 2.2.1 LIB Components -- 2.2.2 Materials Selection Criteria for Electrodes and Electrolyte -- 2.3 Chemistry of LIBs -- 2.3.1 Chemistry of the Anode Materials -- 2.3.1.1 Graphite (Carbon-based) -- 2.3.1.2 Silicon (Si) -- 2.3.1.3 Lithium Titanate ($\text{Li}_4\text{Ti}_5\text{O}_{12}$) -- 2.3.1.4 Metallic Lithium (Li) -- 2.3.2 Chemistry of the Cathode Materials -- 2.3.2.1 Lithium Cobalt Oxide (LCO/ LiCoO_2) -- 2.3.2.2 Lithium Iron Phosphate (LFP/ LiFePO_4) -- 2.3.2.3 Lithium Manganese Oxide (LMO/ LiMn_2O_4) -- 2.3.2.4 Nickel-Cobalt-Manganese (NCM) Based Cathode Materials -- 2.3.3 Transport of Li^+ Across the Electrolyte and Separator -- 2.4 Physics of Li-ion Batteries -- 2.4.1 Electrochemical Potential of Electrodes and Open Circuit Voltage (OCV) -- 2.4.2 Diffusion and Migration -- 2.4.3 Theoretical Capacity or Energy Density -- 2.5 Types of Cells Used So Far in LIB Technology -- 2.6 Physics and Chemistry of Electrochemical Performance Degradation Factors -- 2.7 Major Challenges and Future Prospects of LIBs -- 2.8 Conclusion -- Acknowledgments -- References.

Chapter 3 Lithium-based All-solid-state Thin-film Micro-batteries -- 3.1 Introduction -- 3.2 The Development of the All-solid-state Battery -- 3.3 Fabrication Process for TFBs -- 3.3.1 Sputtering -- 3.3.2 Evaporation -- 3.3.3 Pulsed Laser Deposition (PLD) -- 3.3.4 Chemical Vapour Deposition (CVD) -- 3.3.5 Atomic Layer Deposition (ALD) -- 3.3.6 Electrodeposition -- 3.3.7 Hydrothermal -- 3.3.8 Sol-Gel -- 3.3.9 Solvent Casting -- 3.3.10 Patterning -- 3.3.11 Wet Etching -- 3.3.12 Dry Etching -- 3.3.13 Lift-off -- 3.4 Design Considerations -- 3.4.1 2D and 3D Lateral Cell -- 3.4.2 2D and 3D Vertical Cell -- 3.4.3 Cell Stacking -- 3.5 Materials for Thin-film Batteries -- 3.5.1 Physics of Electrodes -- 3.5.1.1 Thermodynamics for Insertion and Alloying Electrodes -- 3.5.1.2 Ion Diffusion in Solids -- 3.5.1.3 Electron Conduction in Solids -- 3.5.1.4 Ion-transfer and Electron-transfer Reaction -- 3.5.2 Cathode Materials -- 3.5.2.1 LiCoO_2 (LCO) -- 3.5.2.2 LiFePO_4 (LFP) -- 3.5.2.3 LiMn_2O_4 -- 3.5.2.4 LiNiO_2 -- 3.5.2.5 LiV_xO_y -- 3.5.2.5.1 LiV_3O_8 -- 3.5.2.5.2 LiV_2O_5 -- 3.5.2.6 Li_xMoO_3 -- 3.5.2.7 Conclusion on Cathode Materials for TFBs -- 3.5.3 Anode Materials -- 3.5.3.1 Aluminium -- 3.5.3.2 Indium and In_2O_3 -- 3.5.3.3 Tin, SnO_2 and Sn_3N_4 -- 3.5.3.4 Silicon -- 3.5.3.5 TiO_2 -- 3.5.3.6 Conclusion on Anode Materials for TFBs -- 3.5.4 Solid Electrolytes for TFBs -- 3.5.4.1 Physics of Solid Electrolytes -- 3.5.4.1.1 Crystalline Solid Electrolyte -- 3.5.4.1.2 Glassy Solid Electrolyte -- 3.5.4.1.3 High Molecular Weight Polymer Electrolyte -- 3.5.4.2 Examples of Thin-film Solid Electrolytes -- 3.5.4.2.1 LPS/LGPS Electrolyte (Glassy/Semi-crystalline/Crystalline) -- 3.5.4.2.2 LTP/LZP Electrolyte (Crystalline) -- 3.5.4.2.3 LAGP/LATP Electrolyte (Crystalline) -- 3.5.4.2.4 LLZO/LLTO Electrolyte (Crystalline) -- 3.5.4.2.5 LiPON and LiSiPON Electrolyte (Glassy). -- 3.5.4.2.6 Li_3OCl Electrolyte (Crystalline) -- 3.5.4.2.7 Conclusion on Electrolyte Materials for TFBs -- 3.5.4.3 Dendrite Formation in Solid Electrolytes -- 3.5.5 Anode-free Configuration for High Integration Level -- 3.5.5.1 Advantages and Drawbacks of Anode-free Configuration -- 3.5.5.2 Plating and Stripping of Metallic Lithium -- References -- Section II: Anodes -- Chapter 4 Section II: Anodes -- 4.1

Introduction -- 4.2 Recent Progress on Fe₂O₃ for Its Application in LIB
Anodes -- 4.3 Recent Progress on Fe₃O₄ as an Anode for LIB
Application -- 4.4 Summary and Future Prospects -- References --
Chapter 5 Manganese Oxide as an Anode for Li Rechargeable Batteries
-- 5.1 Introduction -- 5.2 MnO as an Anode Material for Li
Rechargeable Batteries -- 5.3 MnO₂ as an Anode Material for Li
Rechargeable Batteries -- 5.4 Mn₂O₃ as an anode material for Li
Rechargeable Batteries -- 5.5 Mn₃O₄ as an Anode Material for Li
Rechargeable Batteries -- 5.6 Conclusion -- References -- Chapter 6
Design and Fabrication of SiO₂-based Anodes for High Energy Density
Li Rechargeable Batteries -- 6.1 Introduction -- 6.2 Aspects of Anodes
Based on Silicon Dioxide (SiO₂) -- 6.2.1 The Role of Silicon Oxide in
Lithiation -- 6.2.2 The Anode Is a SiO₂/Metal Hybrid -- 6.2.3 SiO₂/C
Hybrid Anode Materials -- 6.3 SiO₂ Coating with Carbonaceous and
Other Oxide-based Materials -- 6.4 Conclusions -- Abbreviations --
References -- Chapter 7 SnO₂ and Its Composites as Anode Materials
for Li Rechargeable Batteries -- 7.1 Introduction -- 7.2 Role of SnO₂ in
Lithium Ion Batteries: Glimpse of the Journey During the Last Decade --
7.2.1 SnO₂/Carbon -- 7.2.2 SnO₂/Graphene or Reduced Graphene --
7.2.3 SnO₂/Carbon Nanotubes (CNTs) -- 7.2.4 SnO₂/Carbon Black --
7.2.5 SnO₂/Carbon Nanofibers -- 7.2.6 SnO₂/Carbon Spheres -- 7.2.7
SnO₂/Carbon Cloth -- 7.2.8 Doping of SnO₂ with Transition Metals.
7.2.9 SnO₂/Transition Metals/Carbon -- 7.3 SnO₂ and Its Composites
for LIBs: Recent Research Progress with Future Research Needs -- 7.3.1
Recent Research Progress -- 7.3.2 Future Prospects -- 7.4 Summary
and Conclusions -- Acknowledgments -- References -- Section III:
Cathodes -- Chapter 8 Section III: Cathodes -- 8.1 Introduction -- 8.2
Chemical Composition and Geometrical Structure -- 8.3
Electrochemical Reactions -- 8.4 Synthesis Techniques -- 8.4.1 Solid-
state Reaction (SSR) -- 8.4.2 Sol-Gel Synthesis Method -- 8.4.3
Hydrothermal/Solvothermal Synthesis -- 8.4.4 Co-precipitation Method
-- 8.4.5 Miscellaneous Methods -- 8.5 Electrochemical Performance --
8.5.1 Surface Modification -- 8.5.1.1 Metal Oxide-based Surface
Modification -- 8.5.1.2 Metal Doping of LiMnO₂ Cathode -- 8.5.2
Composites for LiMnO₂ Cathode -- 8.6 Degradation Mechanism for
LiMnO₂ Cathode Material -- 8.6.1 In Situ XRD Studies -- 8.6.2 In Situ
Synchrotron Diffraction -- 8.7 Status of LiMnO₂ Material for Potential
Applications and Current Challenges -- 8.8 Future Scope -- 8.9
Conclusions -- Acknowledgments -- References -- Chapter 9
Exploring LiMO₂ (M=Ni, Co) as a High Performance Cathode Material
for Li-ion Batteries -- 9.1 Introduction -- 9.2 Basic Working Principle
of Lithium-ion Batteries (LIBs) -- 9.3 Properties of Cathode Materials
for Lithium-ion Batteries -- 9.4 Discovery of Oxides of Cathodes -- 9.5
Transition Metal Oxides as Positive Electrode Materials -- 9.6 Summary
and Outlook -- References -- Chapter 10 Uncovering the Limits of
Lithium Cobalt Oxide: Challenges and Innovations for High-voltage
Lithium-ion Batteries -- 10.1 Introduction -- 10.2 Role of Cathode
Materials in LIBs -- 10.3 Discovery and Historical Context of LiCoO₂ --
10.3.1 The Early Stages: Preliminary Investigations -- 10.3.2 Prof.
Goodenough's Seminal Contribution.
10.3.3 Furthering the Exploration: Beyond Goodenough's Discovery --
10.3.4 Integration into Practical Batteries -- 10.3.5 Commercial
Breakthrough and Legacy -- 10.4 Challenges of High-voltage LiCoO₂-
based Batteries -- 10.4.1 Risks of Charging Beyond 4.2 V vs. Li/Li⁺ --
10.4.2 Phase Transition -- 10.4.3 Surface Degradation -- 10.4.4
Inhomogeneous Reactions -- 10.5 Modification Methods for LiCoO₂ --
10.5.1 Element Doping -- 10.5.2 Surface Modification -- 10.5.3 Defect
Engineering -- 10.6 State-of-the-art LiCoO₂-based Lithium-ion

Batteries -- 10.6.1 Recent Developments and Breakthroughs -- 10.7 Conclusion -- References -- Chapter 11 A New Lithium-based Oxide, Li_3MRuO_5 (M=Ni, Fe) as a Cathode Material for Li Rechargeable Batteries: Magnetic and Electrical Aspects -- 11.1 Introduction -- 11.1.1 General Review of Li_3MRuO_5 (M=Ni, Fe) Materials -- 11.2 Synthesis of Li_3MRuO_5 (M=Ni, Fe) -- 11.3 Structural Aspects of Li_3MRuO_5 (M=Ni, Fe) -- 11.3.1 X-ray and Neutron Diffraction -- 11.3.2 SEM Analysis -- 11.4 Heat Capacity Study of Li_3MRuO_5 (M=Ni, Fe) -- 11.5 Magnetic Study of Li_3MRuO_5 (M=Ni, Fe) -- 11.5.1 DC and AC-magnetisation -- 11.5.2 M-H Hysteresis Loop -- 11.6 Electrical Study of Li_3MRuO_5 (M=Ni, Fe) -- 11.6.1 Dielectric and Pyroelectric Properties -- 11.6.2 Magneto-dielectric Properties -- 11.7 Summary and Conclusions -- Acknowledgments -- References -- Chapter 12 Nickel Manganese Cobalt Oxide (NCM) Cathode Materials -- 12.1 Introduction -- 12.1.1 The Birth of Rechargeable Lithium Batteries -- 12.1.2 The Lithium Batteries - Components and Working Principle -- 12.1.3 Types of Cathodes and Their Importance -- 12.1.3.1 LiCoO_2 vs. LiNiO_2 as a Cathode -- 12.1.3.2 Nickel Manganese Cobalt Oxides (NCM) Derived from LiNiO_2 -- 12.1.4 Scope of the Chapter -- 12.2 Chemistry and Structure of NCM Materials. 12.2.1 Explanation of the Chemical Composition of NCM Materials.

Sommario/riassunto

This title will give an overview of the oxides in use in electrochemical energy storage devices, with the aim of providing an understanding of oxide materials and their utilization in energy fields for future development.
