Sommario/riassunto	This audiobook is narrated by a digital voice. This comprehensive guide shows you how to build intelligent AI agents using LLMs, revolutionizing your ability to process and generate human-like language. Learn how to leverage pre-trained language models like for a wide range of applications, from natural language processing to text generation and dialogue systems. With step-by-step instructions and real-world examples, this book will help you develop AI agents that can understand, respond to, and even generate human-like text. What's inside this Book?: Detailed explanations of AI agents and knowledge graph technologies, with a focus on practical implementation. Step-by-step instructions for setting up and configuring Neo4j and LangGraph in real-world environments. Proven methods for data modelling, query optimization, and system scaling. Real-world case studies and success stories from healthcare, finance, retail, and more. Advanced strategies for ensuring security, privacy, and effective data governance in intelligent systems. By the end of this book, you'll not only understand the transformative power of AI agents but also know how to start

integrating them into your own life and business. Whether you're looking to automate routine tasks or create advanced AI systems to optimize your operations, this book will provide the knowledge and tools you need to stay ahead of the curve.
