Sommario/riassunto

Giving Through Teaching presents compelling stories of nurse educators and their students who have given their time, talents, skills, and resources to make the world a better place. Sharing stories from more than 70 nurse educators, this unique book inspires nurses to continue the work of their peers and to tell their own stories. Highlighting the efforts of U.S. nurse educators both at home and abroad-from areas devastated by Hurricane Katrina to Iraq-the text showcases the diversity of the nursing profession itself. This collection of stories also examines how the knowledge and expertise of

Sommario/riassunto

Amphetamines are a family of substituted phenethylamine compounds that achieve their neurochemical and behavioral effects by liberating vesicular biogenic amine stores. Classified as psychostimulants, these drugs are commonly misused and abused. This book presents current research in the study of the neurobiological mechanisms, and pharmacology effects of amphetamines. Topics discussed include the neurotoxicity of methamphetamine; amphetamine effects on cardiac, endocrine and gastrointestinal systems; amphetamine dependence sensitization and tolerance hypotheses and amphetamine effects on allergic lung inflammation, amphetamine withdrawal and schizophrenia.
