| Sommario/riassunto      | Each year, the concentration of dissolved inorganic carbon (DIC) in the mixed layer at Station S in the Sargasso Sea decreases from winter to summer by about 30 umol/kg. The authors of this study demonstrate that by simultaneously observing changes in the stable isotopic ration of DIC, it is possible to quantify the contribution of physical and                                                                                                                                                                                                                                                                                    |

biological processes to this summer-fall drawdown. They find that biology is the dominant contributor to the drawdown, but that physical processes also play an important role.

| Sommario/riassunto      | Alive with the exuberance, contradictions, and variety of the Golden State, this Depression-era guide to California is more than 700 pages of information that is, as David Kipen writes in his spirited introduction, "anecdotal, opinionated, and altogether habit-forming." Describing the history, culture, and roadside attractions of the 1930's, the WPA Guide to California features some of the very best anonymous literature of its era, with writing by luminaries such as San Francisco poet Kenneth Rexroth, composer-writer- hobo Harry Partch, and authors Tillie Olsen and Kenneth Patchen. |
