Sommario/riassunto	Quante volte ci siamo imbattuti in dichiarazioni quali "l'emisfero cerebrale sinistro e quello logico, quello destro e quello creativo", o in sensazionalistici titoli di giornali sulla scoperta dell'area cerebrale dell'amore, del linguaggio, o di chissa quale altra funzione mentale? Oggigiorno, la maggior parte dei neuroscienziati prenderebbe le distanze da affermazioni così semplicistiche, affrettandosi a precisare che il cervello è più complesso di così. E tuttavia, la pratica di 'mappare' certe categorie psicologiche entro determinate aree neurali ha svolto, e forse svolge tuttora, un'importante funzione nell'organizzare e riorganizzare le nostre conoscenze sulla mente e sulla sua realizzazione fisica. Ma cosa vuol dire che una funzione cognitiva viene "mappata" in un'area neurale? E poi, quali sono queste funzioni cognitive da mappare? E perché mapparle con aree (definite come poi?) anziché cellule, reti di aree, o altri insiemi di neuroni? I filosofi che affrontano domande simili hanno dato vita all'appassionante dibattito sull' Ontologia Cognitiva. Scopo di questo volume è presentare il dibattito, avvalendosi di tre esempi: la storia dell'area di Broca e quelle più recenti della ricerca correlati neurali delle emozioni di base nonché

della cosiddetta "area facciale fusiforme".

Sommario/riassunto	"First released in 2005, Ken Hyland's Metadiscourse has become a canonical account of how language is used in written communication. 'Metadiscourse' is defined as the ways that writers reflect on their texts to refer to themselves, their readers or the text itself. It is a key resource in language as it allows the writer to engage with readers in familiar and expected ways and as such it is an important tool for students of academic writing in both the L1 and L2 context. This book achieves for main goals: - to provide an accessible introduction to metadiscourse, discussing its role and importance in written communication and reviewing current thinking on the topic - to explore examples of metadiscourse in a range of texts from business, academic, journalistic, and student writing - to offer a new theory of metadiscourse - to show the relevance of this theory to students, academics and language teachers. The book shows how writers use the devices of metadiscourse to adjust the level of personality in their texts, to offer a representation of themselves and their arguments. It

shows how these tools help the reader organise, interpret and evaluate the information presented in the text. Knowing how to identify metadiscourse as a reader is a key skill to be learnt by students of discourse analysis and this book makes this a central goal."--
