Sommario/riassunto	Sedimentary basins host, among others, most of our energy and fresh-water resources: they can be regarded as large geo-reactors in which many physical and chemical processes interact. Their complexity can only be well understood in well-organized interdisciplinary co-operations. This book documents how researchers from different geoscientific disciplines have jointly analysed the structural, thermal, and sedimentary evolution as well as fluid dynamics of a complex sedimentary basin system which has experienced a variety of activation and reactivation impulses as well as intense salt tectonics. In this book

we have summarized our geological, geophysical and geochemical understanding of some of the most important processes affecting sedimentary basins in general and our view on the evolution of one of the largest, best explored and most complex continental sedimentary basins on Earth: The Central European Basin System.

Sommario/riassunto

The memory of past atrocity lingers like a ghost at the table of
democracy. Injustices carried out in the past - from massacres and
murder to repression and detention - embitter societies and distort
their structures so that the process of establishing and running a
democracy carries an extra burden. This volume examines societies at
various stages of dealing with the memory of the past, from China,
Mongolia, Indonesia and the Baltic States, where bitter memories of
death and persecution still intrude, to Finland, where the civil war of
1918 has finally been accepted as a distant national tragedy
