| Sommario/riassunto | This book empirically maps the decline in standards since the inauguration of Irish independence in 1922, to the loss of Irish economic sovereignty in 2010. It argues that the definition of corruption is an evolving one. As the nature of the state changes, so too does the type of corruption. New evidence is presented on the early institutional development of the state. Irish public life was motivated by an ethos which rejected patronage. Original research provides fresh insights into how the policies of economic protectionism and discretionary decision making led to eight Tribunal inquiries. |

## Sommario/riassunto

Long description: „Wenn es Wirklichkeitssinn gibt, muss es auch Möglichkeitssinn geben“ – so heißt es in Robert Musils *Der Mann ohne Eigenschaften*. Auch in der Philosophie wird die Frage nach der Möglichkeit immer wieder thematisiert. Edmund Husserl, der Begründer der Phänomenologie, ist wohl einer der bekanntesten Philosophen, die sich mit der Möglichkeit beschäftigt haben. Neben seinen detaillierten Analysen der Wahrnehmung, der Einführung der phänomenologischen Reduktion und der Entdeckung der Lebenswelt führt der Möglichkeitsbegriff allerdings ein Schattendasein in der Rezeption Husserls. Henning Stahl Schmidt zeigt jedoch, dass Husserls Phänomenologie von einem ausgeprägten Möglichkeitssinn getragen ist: Mit Hilfe seiner Möglichkeitsbegriffe entfaltet Husserl die Spielräume eines freien und vernunftgeleiteten Subjekts und beleuchtet so die Beziehungen zwischen Leib, Bewusstsein und Welt auf eine ganz eigene Weise. Das leiblich-seelisch verfasste Subjekt ist nicht nur im Hier und Jetzt, sondern strebt durch das Mögliche hindurch den Horizonten seiner Erfahrung entgegen.

Biographical note: Henning Stahl Schmidt, \*1976 in Siegen, lebt in Essen, ist Bauingenieur und bei einem der größten Abwasserverbände Deutschlands als Projektleiter tätig. Aus Begeisterung für die Philosophie begann er 2015 sein berufsbegleitendes Studium an der FernUniversität in Hagen, das er im Jahr 2020 abschloss. Seit 2017 ist er Mitglied im „Arbeitskreis philosophierender In-ingenieure und Naturwissenschaftler“ (APHIN).

| Sommario/riassunto      | <p>DNA damage is a major threat to genomic integrity and cell survival. It can arise both spontaneously and in response to exogenous agents. DNA damage can attack most parts of the DNA structure, ranging from minor and major chemical modifications, to single-strand breaks (SSBs) and gaps, to full double-strand breaks (DSBs). If DNA injuries are mis-repaired or unrepaired, they may ultimately result in mutations or wider-scale genome aberrations that threaten cell homeostasis. Consequently, the cells elicit an elaborate signalling network, known as DNA damage response (DDR), to detect and repair these cytotoxic lesions. This Research Topic was aimed at comprehensive investigations of basic and novel mechanisms that underlie the DNA damage response in eukaryotes.</p> <p>DNA damage is a major threat to genomic integrity and cell survival.
