## Sommario/riassunto

Genetic Databases offers a timely analysis of the underlying tensions, contradictions and limitations of the current regulatory frameworks for, and policy debates about, genetic databases. Drawing on original empirical research and theoretical debates in the fields of sociology, anthropology and legal studies, the contributors to this book challenge the prevailing orthodoxy of informed consent and explore the relationship between personal privacy and the public good. They also consider the multiple meanings attached to human tissue and the role of public consultations and commercial

Sommario/riassunto

Two Crises, Different Outcomes examines East Asian policy reactions to the two major crises of the last fifteen years: the global financial crisis of 2008-9 and the Asian financial crisis of 1997-98. The calamity of the late 1990s saw a massive meltdown concentrated in East Asia. In stark contrast, East Asia avoided the worst effects of the Lehman Brothers collapse, incurring relatively little damage when compared to the financial devastation unleashed on North America and Europe. Much had changed across the intervening decade, not least that China rather than Japan had become the locomotive of regional growth, and that the East Asian economies had taken numerous steps to buffer their financial structures and regulatory regimes. This time, Asia avoided disaster; it bounced back quickly after the initial hit and has been growing in a resilient fashion ever since. The authors of this book explain how the earlier financial crisis affected Asian economies, why government reactions differed so widely during that crisis, and how Asian economies weathered the Great Recession. Drawing on a mixture of single-country expertise and comparative analysis, they conclude by assessing the long-term prospects that Asian countries will continue their recent success. Contributors: Muhamad Chatib Basri, Minister of Finance of the Republic of Indonesia and Professor of Economics at the University of Indonesia; Yun-han Chu, Institute of Political Science, Academia Sinica; Richard Doner, Emory University; Barry Naughton, University of California, San Diego; Yasunobu Okabe, Japan International Cooperation Agency Research Institute; T. J. Pempel, University of California, Berkeley; Thomas Pepinsky, Cornell University; Keiichi Tsunekawa, National Graduate Institute for Policy Studies, Tokyo

| Sommario/riassunto      | A technique used to amplify the number of copies of a specific region of DNA, the polymerase chain reaction (PCR) is at the forefront of the dramatic development of biochemistry. This text provides the tools for developing innovative approaches to using this leading technology. It includes theoretical considerations, discussions, and a selection of state-of-the-art techniques for mutation studies, clinical diagnosis, and the detection of food-borne pathogens. This edition also discusses the preparation of PCR experiments, includes examples of analytical PCR divided into qualitative and quantitative applications, and explores preparative methods that address DNA generation for further analysis and in vitro evolution--Provided by publisher. |
