Smith -- Homer in Florina / Ioannis Akamatis -- Colleagues and students who worked with James R. McCredie on Samothrace, 1962-2008.

Sommario/riassunto

This volume of sixteen papers is dedicated to James R. McCredie in celebration of his outstanding contribution to the excavation and study of the sanctuary of the Great Gods on the Greek island of Samothrace. The papers focus mainly on the art and archaeology of Samothrace, while two contributions discuss Alexandria in Egypt and Florina in Macedonia, two areas that were closely connected with Samothrace in antiquity. The volume covers the latest research on the architecture, sculpture, pottery, epigraphy and cult of the sanctuary of the Great Gods on Samothrace, and contains many original architectural drawings and photos of previously unpublished material.

Sommario/riassunto

The successful conclusion of the US-EU Agreement on Science and Technology Cooperation offers the prospect of a new chapter in transatlantic cooperation. As with any international agreement in science and technology, the accord's full potential will be realized only if it can encourage mutually beneficial cooperation. With this in mind, responsible officials of the European Union (EU) and the U.S. government contacted the National Research Council's Board on Science, Technology, and Economic Policy (STEP) to discuss how this negotiating success might be publicized and productively exploited. It was agreed that the STEP Board should organize a conference to celebrate the accord, inform the U.S. and European research communities of the agreement, and explore specific opportunities for enhanced cooperation. At the same time, the conference would provide the occasion to review existing and evolving areas of transatlantic cooperation in science and technology from the perception of the United States, the European Commission, and the member states of the European Union.
