

1. Record Nr.	UNINA9911153988103321
Autore	Dhanabalan Shanmuga Sundar
Titolo	Advances in All-Optical Communication
Pubbl/distr/stampa	Bristol : , : Institute of Physics Publishing, , 2024 ©2024
ISBN	9780750356237 0750356235
Edizione	[1st ed.]
Descrizione fisica	1 online resource (249 pages)
Collana	IOP Ebooks Series
Altri autori (Persone)	ThirumuruganArun ThirumaranSridarshini
Disciplina	621.382
Soggetti	Optical communications Photonic crystals
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Nota di contenuto	Intro -- Acknowledgments -- Editor biographies -- Shanmuga Sundar Dhanabalan -- Arun Thirumurugan -- T Sridarshini -- List of contributors -- Chapter Highly efficient materials for photonic crystal-based optical components -- 1.1 Introduction -- 1.1.1 Light as a carrier for data transmission -- 1.1.2 Optical processing -- 1.1.3 Optical communication -- 1.1.4 Photonic crystal structure -- 1.2 Photonic crystal and light propagation -- 1.3 Photonic crystal-based devices -- 1.3.1 Demultiplexer/multiplexer -- 1.3.2 Flip-flop -- 1.3.3 Comparator -- 1.4 Materials used in photonic crystal structures -- References -- Chapter Unidirectional bulk growth of 1,3,5-triphenylbenzene single crystal and doping effect on its optical properties -- 2.1 Introduction -- 2.2 Experiment -- 2.2.1 Conventional crystal growth -- 2.2.2 Bulk growth of stilbene-doped 3PB -- 2.2.3 Characterization techniques -- 2.3 Result and discussion -- 2.3.1 X-ray diffraction analysis -- 2.3.2 UV-visible NIR spectra analysis -- 2.3.3 Fluorescence emission spectrum analysis -- 2.3.4 Lifetime measurement -- 2.3.5 FTIR spectral studies -- 2.3.6 NMR spectra analysis -- 2.4 Conclusions -- References -- Chapter Performance analysis of SOA-based all-optical logic gates over FSO channel -- 3.1 Introduction -- 3.2 Applications, advantages, challenges, and models

of FSO -- 3.3 Related works -- 3.4 Basics of semiconductor optical amplifiers -- 3.4.1 Types of SOA -- 3.4.2 Principal operation of SOA and design of XOR gate -- 3.5 Design of OR gate using RSOA -- 3.6 All-optical device design using SOA and RSOA -- 3.7 Simulation setup of encoded inputs over wired and wireless optical channel -- 3.8 Conclusion -- References -- Chapter Switching characteristics of optical solitons through inelastic interactions -- 4.1 Introduction -- 4.1.1 Telecommunication windows. 4.1.2 Optical soliton formation in an optical fiber -- 4.1.3 Nonlinearity -- 4.1.4 Group velocity dispersion -- 4.1.5 Attenuation -- 4.2 Governing theoretical model -- 4.3 Lax pair for the system (4.10) -- 4.4 Two soliton solutions through Darboux method -- 4.5 Discussion on switching characteristics of femtosecond solitons -- 4.6 Conclusions -- References -- Chapter Silicon photonic modulators for high-speed applications-a review -- 5.1 Introduction -- 5.2 Phase shifters -- 5.2.1 Silicon-based phase shifter -- 5.2.2 Hybrid phase shifters -- 5.3 Mach-Zehnder modulator (MZM) -- 5.4 Ring modulator -- 5.5 Modulator performance metrics -- 5.6 Data centre requirements -- 5.7 Conclusion -- References -- Chapter MIMO-FSO system for various weather conditions -- 6.1 Introduction to free-space optical communication -- 6.1.1 Free-space optical communication -- 6.2 FSO communication principles -- 6.2.1 FSO transceiver -- 6.2.2 FSO classifications -- 6.2.3 FSO applications -- 6.3 Performance evaluation of the FSO system -- 6.3.1 Link budget -- 6.3.2 FSO received optical power -- 6.3.3 Data rate -- 6.3.4 Signal-to-noise ratio and BER -- 6.3.5 Channel models -- 6.4 Introduction to MIMO system -- 6.4.1 From SISO to MIMO to mMIMO -- 6.4.2 mMIMO -- 6.4.3 Benefits of mMIMO -- 6.4.4 mMIMO FSO system -- 6.5 Result analysis -- 6.6 Conclusions -- References -- Chapter AI in optics and photonics -- 7.1 Introduction -- 7.1.1 Introduction to optics and photonics -- 7.1.2 Introduction to AI -- 7.2 Intersection of AI/ML in optics -- 7.2.1 Major applications -- 7.2.2 Major challenges -- 7.3 Intersection of AI in photonics -- 7.3.1 Major applications -- 7.3.2 Major challenges -- 7.4 Conclusion and future scope of AI/ML in optics and photonics -- References -- Chapter Blood components detection in octagonal-cored photonic crystal fiber biosensor for healthcare applications. 8.1 Introduction -- 8.2 Design -- 8.3 Methodology -- 8.4 Results and discussion -- 8.5 Conclusion -- References -- Chapter Photonic biosensors for healthcare applications -- 9.1 Introduction -- 9.2 Biosensors: plasmonic and photonic platforms -- 9.3 Overview of biosensing technologies and plasmonics for healthcare applications -- 9.4 Overview of nanophotonics and plasmonics for healthcare applications: introducing SPCE and PCCE technology -- 9.5 CryoSoret nano-engineering techniques for SPCE-based biosensing applications -- 9.6 Surface plasmon-coupled emission (SPCE): applications in early diagnostics -- 9.6.1 Utility of chromaticity plot for tyrosine and spermidine sensing -- 9.6.2 Utility of luminosity plot for the mercury ion sensing -- 9.7 Ferroplasmon-on-Mirror (FPoM): applications in early diagnostics -- 9.8 Photonic crystal-coupled emission: applications in early diagnostics -- 9.9 Futuristic scope and opportunities -- 9.10 Conclusions -- 9.11 Exercises -- References -- Chapter Integrated photonic devices for cancer detection -- 10.1 Introduction -- 10.2 Surface plasmon resonance (SPR)-based biosensors -- 10.2.1 Principle of SPR -- 10.3 Grating-based biosensors -- 10.3.1 Bragg principle -- 10.4 2D photonic crystal-based biosensors -- 10.4.1 Basics of 2D PhC -- 10.4.2 Types of PhCs -- 10.4.3 Numerical methods -- 10.4.4 Performance parameters of sensor -- 10.4.5 Schematic representation of 2D PhC-based biosensing --

10.4.6 Inference of advance technologies -- 10.5 Conclusion --
References -- Chapter Absorbers as biosensors: leveraging absorption
phenomena for enhanced biosensing -- 11.1 Introduction -- 11.2
Factors influencing sensing performance -- 11.2.1 Metamaterial
design's composition and geometry -- 11.2.2 Frequency range --
11.2.3 Electromagnetic properties -- 11.2.4 Sensitivity and selectivity.
11.2.5 Integration with other materials/devices -- 11.2.6 Fabrication
techniques -- 11.2.7 Environmental factors -- 11.2.8 Signal processing
-- 11.2.9 Application-specific considerations -- 11.2.10 Power usage
-- 11.3 Materials employed for designing biosensor absorbers --
11.3.1 Importance of metal layer and various metals used in
metamaterial-based biosensor -- 11.4 Popular designs of absorbers
for biosensing -- 11.5 Fabrication techniques -- 11.5.1 Substrate
preparation -- 11.5.2 Catalyst deposition -- 11.5.3 Graphene growth
-- 11.5.4 Transfer process -- 11.5.5 Evaluation and optimization --
11.6 Conclusion -- References.

Sommario/riassunto

This book will provide an overview of the recent developments in all-optical communication technology, relevant and critical materials, and recent and emerging applications in various domains. It focuses on all-optical communication technology and applications in the most critical domains: microwaves, Meta surface, Optoelectronics, and photonic fibers.
