

1.	Record Nr.	UNIORUON00039960
	Titolo	Mémoires sur les coutumes de Cambodge de Tcheou Ta-Kouan : Version nouvelle suivie d'un commentaire inachevé / Paul Pelliot
	Pubbl/distr/stampa	Paris, : Maisonneuve, 1951
	Descrizione fisica	178 p. ; 25 cm
	Classificazione	CAM VIII B
	Soggetti	ETNOLOGIA - CAMBOGIA VIAGGI - CAMBOGIA
	Lingua di pubblicazione	Francese
	Formato	Materiale a stampa
	Livello bibliografico	Monografia
2.	Record Nr.	UNINA9911020244003321
	Autore	Lipiansky Ed
	Titolo	Electrical, electronics, and digital hardware essentials for scientists and engineers / / Ed Lipiansky
	Pubbl/distr/stampa	Hoboken, N.J., : Wiley, 2013
	ISBN	9781118414545 1118414543 9781283835077 128383507X 9781118414521 1118414527
	Descrizione fisica	1 online resource (665 p.)
	Collana	IEEE Press series on microelectronic systems ; ; 12
	Classificazione	TEC008010
	Disciplina	621.3
	Soggetti	Electronic circuits Electronic apparatus and appliances
	Lingua di pubblicazione	Inglese
	Formato	Materiale a stampa
	Livello bibliografico	Monografia
	Note generali	Includes index.

Preface	xvii
About the Author	xix
1 From the Bottom Up: Voltages, Currents, and Electrical Components	1
1.1 An Introduction to Electric Charges and Atoms	1
1.2 Electric DC Voltage and Current Sources	3
1.3 Electric Components: Resistors, Inductors, and Capacitors	12
1.4 Ohm's Law, Power Delivered and Power Consumed	25
1.5 Capacitors	33
1.6 Inductors	44
1.7 Kirchhoff's Voltage Law (KVL) and Kirchhoff's Current Law (KCL)	73
1.8 Summary	87
2 Alternating Current Circuits	98
2.1 AC Voltage and Current Sources, Root Mean Square Values (RMS), and Power	98
2.2 Sinusoidal Steady State: Time and Frequency Domains	111
2.3 Time Domain Equations: Frequency Domain Impedance and Phasors	123
2.4 Power in AC Circuits	136
2.5 Dependent Voltage and Current Sources	145
2.6 Summary of Key Points	149
3 Circuit Theorems and Methods of Circuit Analysis	155
3.1 Introduction	155
3.2 The Superposition Method	156
3.3 The Thevenin Method	165
3.4 Norton's Method	172
3.5 The Mesh Method of Analysis	179
3.6 The Nodal Method of Analysis	199
3.7 Which One Is the Best Method?	210
3.8 Using all the Methods	213
3.9 Summary and Conclusions	225
4 First- and Second-Order Circuits under Sinusoidal and Step Excitations	233
4.1 Introduction	233
4.2 The First-Order RC Low-Pass Filter (LPF)	235
4.3 The First-Order RC High-Pass Filter (HPF)	252
4.4 Second-Order Circuits	265
4.5 Series RLC Second-Order Circuit	266
4.6 Second-Order Circuit in Sinusoidal Steady State: Bode Plots	275
4.7 Drawing the Second-Order Bode Plots Using Asymptotic Approximations	278
4.8 Summary	279
5 The Operational Amplifier as a Circuit Element	287
5.1 Introduction to the Operational Amplifier	287
5.2 Ideal and Real Op Amps	288
5.3 Brief Definition of Linear Amplifiers	290
5.4 Linear Applications of Op Amps	294
5.5 Op Amps Nonlinear Applications	331
5.6 Operational Amplifiers Nonidealities	341
5.7 Op Amp Selection Criteria	343
5.8 Summary	347
6 Electronic Devices: Diodes, BJTs, and MOSFETs	354
6.1 Introduction to Electronic Devices	354
6.2 The Ideal Diode	355
6.3 Bipolar Junction Transistors (BJT)	374
6.4 Metal Oxide Field Effect Transistor (MOSFET)	420
6.5 Summary	443
7 Combinational Circuits	456
7.1 Introduction to Digital Circuits	456
7.2 Binary Numbers: a Quick Introduction	456
7.3 Boolean Algebra	460
7.4 Minterms: Standard or Canonical Sum of Products (SOP) Form	467
7.5 Maxterms: Standard or Canonical Product of Sums (POS) Form	472
7.6 Karnaugh Maps and Design Examples	473
7.7 Product of Sums Simplifications	490
7.8 Don't Care Conditions	491
7.9 Logic Gates: Electrical and Timing Characteristics	495
7.10 Summary	500
8 Digital Design Building Blocks and More Advanced Combinational Circuits	503
8.1 Combinational Circuits with More than One Output	503
8.2 Decoders and Encoders	510
8.3 Multiplexers and Demultiplexers (MUXes and DEMUXes)	519
8.4 Signed and Unsigned Binary Numbers	527
8.5 Arithmetic Circuits: Half-Adders (HA) and Full-Adders (FA)	533
8.6 Carry Look Ahead (CLA) or Fast Carry Generation	543
8.7 Some Short-Hand Notation for Large Logic Blocks	546
8.8 Summary	547
9 Sequential Logic and State Machines	550
9.1 Introduction	550
9.2 Latches and Flip-Flops (FF)	552
9.3 Timing Characteristics of Sequential Elements	571
9.4 Simple State Machines	574
9.5 Synchronous State Machines General Considerations	592
9.6 Summary	599
10 A Simple CPU Design	603
10.1 Our Simple CPU Instruction Set	603
10.2 Instruction Set Details: Register Transfer Language (RTL)	605
10.3 Building a Simple CPU: A Bottom-Up Approach	607
10.4 Data Path	

Architecture: Putting the Logic Blocks Together 615 -- 10.5 The Simple
CPU Controller 620 -- 10.6 CPU Timing Requirements 626 -- 10.7
Other System Pieces: Clock, Reset and Power Decoupling 628 -- 10.8
Summary 633 -- Further Reading 633 -- Problems 633 -- Index 637.

Sommario/riassunto

"In order for all components of electric circuits to function flawlessly, electric device engineers need to be able to test, evaluate, and problem-solve the circuit board as a whole. Written by an expert with 25 years of working experience in Silicon Valley, this practical book walks readers through a wide variety of circuit analysis methods, discussing the pros and cons for each method, and how to evaluate it and solve everyday circuit analysis problems. Both basic and advanced tools are covered, along with trouble-shooting tips, practical examples, and numerous illustrations to facilitate comprehension"--
