Note generali	Description based upon print version of record.
Nota di bibliografia	Includes bibliographical references and index.
Nota di contenuto	Introduction to Optical Fault Management -- Failure Restoration Approaches -- Failure Localization via a Central Controller -- Distributed Failure Localization -- Framework Introduction -- Global Neighborhood Failure Localization -- Dynamic Survivable Routing with M-Trails.
Sommario/riassunto	This book covers the issues of monitoring, failure localization, and restoration in the Internet optical backbone, and focuses on the progress of state-of-the-art in both industry standard and academic research. The authors summarize, categorize, and analyze the developed technology in the context of Internet fault management and failure recovery under the Generalized Multi-Protocol Label Switching (GMPLS), via both aspects of network operations and theories.

Examines monitoring, failure localization, and failure restoration in the Internet backbone Includes problem formulations based on combinatorial group testing and topology coding Covers state-of-the-art development for the Internet backbone fault management and failure recovery.

Sommario/riassunto

Studying mine-drainage works of a medieval principality living through times of war, social turmoil, and land reclamation, this book examines the relation between political power and mineral wealth. It argues that mine-drainage works in Monte Calisio, Trento emerged when violent economic warfare within the upper class created profit horizons that capital seized in the subsoil of the principality. From that moment forward, war against hydrogeological conditions justified the existence of private mining capital in the principality. This book shows that hegemonic powers striving to manage mineral wealth failed to monopolize the forces of economic change that sustained their ground as these forces shifted profit relations. Increased mining rents and profits placed a heavy burden on Prince Bishop Wangsa, leading to explosive contradictions concealed in the rise of private mine-drainage works. The book offers an illuminating interpretation of the role mining played in the rise and fall of European resource hegemonies. Jeannette Graulau is Professor of Political Science at Lehman College, The City University of New York.
