## Sommario/riassunto

Plants and microbes interact in a complex relationship that can have both harmful and beneficial impacts on both plant and microbial communities. Effectors, secreted microbial molecules that alter plant processes and facilitate colonization, are central to understanding the complicated interplay between plants and microbes. *Effectors in Plant-Microbe Interactions* unlocks the molecular basis of this important class of microbial molecules and describes their diverse and complex interactions with host plants. *Effectors in Plant-Microbe Interactions* is divided into five sections t

## Sommario/riassunto

Dieses Open-Access-Buch widmet sich den Vorstellungen von Schüler\*innen zu Politik und politischen Konflikten, versucht diese empirisch begründet sowie mit Bezug auf politische Theorie zu rekonstruieren und strebt didaktisch motiviert danach, Leitlinien einer politischen Bildung in der Primarstufe zu bezeichnen. Mit Hilfe der innovativen «Wimmelbild-Methode» werden zehn- bis zwölfjährige Schülerinnen und Schüler in Gruppendiskussionen angeregt, ihre politischen Vorstellungen zu versprachlichen. Die daraus resultierenden Vorstellungen zu Politik, politischem Protest, Wahlen und Abstimmungen sowie zu demokratischer Staatlichkeit, werden in der Studie zu Denkfiguren verdichtet und in ein politikdidaktisches Modell im Anschluss an die politische Theorie Hannah Arendts eingebettet. Ausgehend hiervon werden Prinzipien für eine frühe politische Bildung bezeichnet. Der Autor Michel Dängeli ist Dozent im Bereich Sachunterricht bzw. Natur Mensch Gesellschaft (NMG) an der Pädagogischen Hochschule Bern und arbeitet im Institut Primarstufe. In Forschung und Lehre beschäftigt er sich schwerpunktmäßig mit historischer und politischer Bildung.
