## Sommario/riassunto

The Coding Revolution—a combination of the Digital Revolution and genetic engineering—has had a destructive effect on society. It has created a platform for extreme views that is loosening our economic, cultural, and political moorings. This book provides a systematic approach to policy and management to promote societal collaboration and unity. It describes the changes caused by the Digital Age, including the Internet, Artificial Intelligence, and various other technologies. The author then offers a new framework, Religious Humanism, which incorporates covenants of the Bible, the US Constitution and other sources of wisdom to foster collaboration and create a revitalized and inclusive global society. Narrative and analytical tools are offered as well as case examples.
