Sommario/riassunto	In Europe, the main oil-rich crops are sunflower, rapeseed and olive which are grown primarily for food. This book discusses how to convert this whole crop into energy (fuels, power and heat), food and bioproducts (chemicals and/or materials), whilst making optimal use of the by-products generated during farming/harvesting, primary processing (oil extraction and refining) and secondary processing (transesterification). The resulting processes are more economically competitive and the business margin for oil and biodiesel manufacturers is improved. Previously, oil crops have been the main point

3. Record Nr.	UNINA9910791091203321
Autore	Sen A

Sommario/riassunto	Anglophone postcolonial studies has been characterized by its secular nature. Yet as the first generation of scholars grapples with mortality, a yearning for spiritual meaning is emerging in many texts. This study synthesizes the sacred language used in these texts with critical theory in order to create a holistic frame for interpretive analysis.
