

1. Record Nr.	UNISA990001182360203316
Autore	FIGINI, Gianfranco
Titolo	Convertitori di potenza : da corrente alternata in corrente continua / Gianfranco Figini, Ignazio Mendolia
Pubbl/distr/stampa	Milano : U. Hoepli, 1994
ISBN	88-203-2118-1
Descrizione fisica	376 p. ; 24 cm.
Altri autori (Persone)	MENDOLIA, Ignazio
Disciplina	621.3135
Soggetti	Convertitori elettrici Corrente elettrica - Conversione
Collocazione	621.3135 FIG B 621.3135 FIG
Lingua di pubblicazione	Italiano
Formato	Materiale a stampa
Livello bibliografico	Monografia

2. Record Nr.	UNINA9910346008603321
Autore	Manuel João Quartilho
Titolo	O processo de somatização: Conceitos, avaliação e tratamento
Pubbl/distr/stampa	Coimbra University Press, 2016
ISBN	989-26-1149-7
Descrizione fisica	1 electronic resource (506 p.)
Collana	Ciências da Saúde
Lingua di pubblicazione	Portoghese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Sommario/riassunto	<p>Widely acknowledged as a relevant public health problem, linked to personal and interpersonal suffering, somatization is still an unresolved problem by medicine. Perhaps because it remains on its margins and asks for solutions that medicine can't offer, among other reasons. It means a clinical region largely ignored or devalued with the fatalistic presumption that the patients, who "are not ill", have to live with the symptomatic pattern that characterizes their behavior. This way, somatization arises as a recurrent motive for non-satisfaction for the patient and also as a frustrating experience for the doctor, given the difficulties that characterize their relationship and the usual non-efficacy of therapeutic interventions. The tacit silence of somatization in clinical practice is broken everyday by this discontent noise, both in primary care and in the general hospital. It is a silence mainly nourished by a most conventional biomedical persuasion, claiming that the patients do have nothing wrong with them. One of the main assumptions of this book defends that the patients have comprehensive and legitimate reasons, in biographical, social and cultural contexts so many times strange to the conventional clinical evaluation, to recur to the somatic metaphor.</p>
