Sommario/riassunto	Since James Barr's work in the 1960's, the challenge for Hebrew scholars has been to continue to apply the insights of linguistic semantics to the study of biblical Hebrew. This book begins by describing a range of approaches to semantic and grammatical analysis, including structural semantics, cognitive linguistics and cognitive metaphors, frame semantics, and William Croft's Radical Construction Grammar. It then seeks to integrate these, formulating a dynamic approach to lexical semantic analysis based on conceptual frames, using corpus annotation. The model is applied to biblical Hebrew in a detailed study of a family of words related to "exploring," "searching," and "seeking." The results demonstrate the value and potential of cognitive, frame-based approaches to biblical Hebrew lexicology.
