A Container more than a Content? Beyond the Essentialization of a Fundamentalism.
Sommario/riassunto	This book addresses the issue of one of the most visible and debated currents in contemporary radical Islam. It sheds light on the history, the fundamental principles, and the political and religious translations of Salafism and explains current events involving Salafist actors in an objective and dispassionate manner. The author explains with precision

the different contemporary Salafist mobilizations by illustrating them with specific cases while shedding light on the main debates related to this mode of understanding of the Muslim religion, such as its potential role in triggering certain forms of violence, the way to compare it to other fundamentalist versions in other religions, or the way to describe, in terms of social sciences, the main concepts and discourses that can be observed in this current of Islam today. Mohamed-Ali Adraoui is Research Fellow and Lecturer in International Relations at Sciences Po Paris, France.

Nota di contenuto	Chapter 1- Introduction to stream ciphers -- Chapter 2- Keystream generators based on irregular decimation -- Chapter 3- Modelling through linear cellular automata -- Chapter 4- Cryptanalysis -- References.
Sommario/riassunto	This book offers a broad survey of all information made public - from 1993 until today - on keystream sequence generators based on irregular decimation, which are referred to as shrinking generators. Starting with an overview of cryptography, it describes each type of generator - shrinking, self-shrinking, modified self-shrinking, generalized self-shrinking and the DECIM algorithm - with examples and references. Further, the book discusses several attacks on these generators and applications. It concludes by demonstrating how the output sequences can be modeled by means of different families of one-dimensional cellular automata, rendering the generators vulnerable to attacks. Intended for researchers and graduate students, the book will hopefully inspire them to search for more details on this family of generators and to address the open problems in this field. .

Sommario/riassunto	This book constitutes the refereed proceedings of the 5th IFIP TC 5, TC 12, WG 8.4, WG 8.9, WG 12.9 International Cross-Domain Conference, CD-MAKE 2021, held in virtually in August 2021. The 20 full papers and 2 short papers presented were carefully reviewed and selected from 48 submissions. The cross-domain integration and appraisal of different fields provides an atmosphere to foster different perspectives and opinions; it will offer a platform for novel ideas and a fresh look on the methodologies to put these ideas into business for the benefit of humanity.
