

1. Record Nr.	UNISA990002933500203316
Autore	HILL, Bert Hodge
Titolo	1.6 : The springs : Peirene, Sacred Spring, Glauke / by Bert Hodge Hill
Pubbl/distr/stampa	Princeton, : The American School of Classical Studies
Descrizione fisica	2 volumi : ill. ; 31 cm
Disciplina	938.7
Soggetti	Oggetti di scavo - Corinto Scavi archeologici - Corinto Corinto Storia Fonti archeologiche
Collocazione	XI.3.B. 111/1.6.2 XI.3.B. 111/1.6.1
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Nota di contenuto	2 : Plates. - 1964. - 1 cartella (18 carte di tavole) ; 55 cm 1: 1964. - XVIII, 235 p.

2. Record Nr.	UNISA996383791003316
Autore	Du Moulin Peter <1601-1684.>
Titolo	A vindication of the sincerity of the Protestant religion in the point of obedience to sovereigns [[electronic resource]] : opposed to the doctrine of rebellion, authorised and practiced by the Pope and the Jesuites : in answer to a Jesuitical libel, entituled Philanax Anglicus // by Peter Du Moulin .
Pubbl/distr/stampa	London, : Printed for John Crook ..., 1668
Edizione	[The third edition with additions.]
Descrizione fisica	[24], 142, [2], 14 p
Soggetti	Protestantism Church and state
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	"Philanax Anglicus, or, A Christian caveat" was first published anonymously before 1663, and was taken mainly from "Jerusalem and Babel" by Matthew Pattenson. It was subscribed "Thomas Bellamy," corrected and enlarged by Sir Henry Janson. Cf. Halkett & Laing. Reproduction of original in Cambridge University Library.
Sommario/riassunto	eebo-0021

3. Record Nr.	UNINA9910784546703321
Autore	Heldt Hans-Walter
Titolo	Plant biochemistry [[electronic resource] /] / by Hans-Walter Heldt in cooperation with Fiona Heldt
Pubbl/distr/stampa	Amsterdam ; ; Boston, : Elsevier Academic Press, c2005
ISBN	1-280-96816-8 9786610968169 0-08-047377-6
Edizione	[An update and translation of the German third edition.]
Descrizione fisica	1 online resource (657 p.)
Altri autori (Persone)	HeldtFiona
Disciplina	572/.2
Soggetti	Botanical chemistry Plant molecular biology
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Description based upon print version of record.
Nota di bibliografia	Includes bibliographical references and index.
Nota di contenuto	Front Cover; Plant Biochemistry; Copyright Page; Contents; Chapter 1. A leaf cell consists of several metabolic compartments; 1.1 The cell wall gives the plant cell mechanical stability; 1.2 Vacuoles have multiple functions; 1.3 Plastids have evolved from cyanobacteria; 1.4 Mitochondria also result from endosymbionts; 1.5 Peroxisomes are the site of reactions in which toxic intermediates are formed; 1.6 The endoplasmic reticulum and Golgi apparatus form a network for the distribution of biosynthesis products; 1.7 Functionally intact cell organelles can be isolated from plant cells 1.8 Various transport processes facilitate the exchange of metabolites between different compartments 1.9 Translocators catalyze the specific transport of substrates and products of metabolism; 1.10 Ion channels have a very high transport capacity; 1.11 Porins consist of $\beta$ -sheet structures; Further reading; Chapter 2. The use of energy from sunlight by photosynthesis is the basis of life on earth; 2.1 How did photosynthesis start?; 2.2 Pigments capture energy from sunlight; 2.3 Light absorption excites the chlorophyll molecule; 2.4 An antenna is required to capture light; Further reading Chapter 3. Photosynthesis is an electron transport process 3.1 The photosynthetic machinery is constructed from modules; 3.2 A reductant and an oxidant are formed during photosynthesis; 3.3 The

basic structure of a photosynthetic reaction center has been resolved by X-ray structure analysis; 3.4 How does a reaction center function?; 3.5 Two photosynthetic reaction centers are arranged in tandem in photosynthesis of algae and plants; 3.6 Water is split by photosystem II; 3.7 The cytochrome-b6/f complex mediates electron transport between photosystem II and photosystem I  
3.8 Photosystem I reduces NADP; 3.9 In the absence of other acceptors electrons can be transferred from photosystem I to oxygen; 3.10 Regulatory processes control the distribution of the captured photons between the two photosystems; Further reading; Chapter 4. ATP is generated by photosynthesis; 4.1 A proton gradient serves as an energy-rich intermediate state during ATP synthesis; 4.2 The electron chemical proton gradient can be dissipated by uncouplers to heat; 4.3 H<sup>+</sup>-ATP synthases from bacteria, chloroplasts, and mitochondria have a common basic structure  
4.4 The synthesis of ATP is effected by a conformation change of the protein; Further reading; Chapter 5. Mitochondria are the power station of the cell; 5.1 Biological oxidation is preceded by a degradation of substrates to form bound hydrogen and CO<sub>2</sub>; 5.2 Mitochondria are the sites of cell respiration; 5.3 Degradation of substrates for biological oxidation takes place in the matrix compartment; 5.4 How much energy can be gained by the oxidation of NADH?; 5.5 The mitochondrial respiratory chain shares common features with the photosynthetic electron transport chain  
5.6 Electron transport of the respiratory chain is coupled to the synthesis of ATP via proton transport

---

#### Sommario/riassunto

This fully revised translation of the world-renowned German edition covers the complete and modern knowledge of plant biochemistry. The book presents the topic in a concise and simplified manner so that students can digest the message and gain a basic knowledge of the entire field of plant biochemistry, from photosynthesis (the synthesis of natural plant products) to all kinds of genetic engineering with its many commercial applications. Topics include cell structure and function, lipid and polysaccharide metabolism, nitrogen fixation, phloem transport, synthesis and function of isoprenoid
