Note generali	Description based upon print version of record.
Nota di bibliografia	Includes bibliographical references and indexes.
Nota di contenuto	part I. Aquatic modelling and uncertainty -- part II. Hydrology-based modelling and pollutant loading -- part III. Subsurface modelling and pollutant transport in soils -- part IV. Uncertainty in bioaccumulation modelling -- part V. Air quality modelling and sensitivity analysis.
Sommario/riassunto	Environmental modelling has enjoyed a long tradition, but there is a defined need to continually address both the power and the limitations of such models, as well as their quantitative assessment. This book showcases modern environmental modelling methods, the basic theory behind them and their incorporation into complex environmental investigations. It highlights advanced computing technologies and how they have led to unprecedented and adaptive modelling, simulation and decision-support tools to study complex environmental systems, and how they can be applied to current environmental concer
