

1. Record Nr.	UNISA990003603240203316
Autore	CARDILLI, Riccardo
Titolo	"Bona fides" tra storia e sistema / Riccardo Cardilli
Pubbl/distr/stampa	Torino : Giappichelli, 2010
ISBN	978-88-348-9883-3
Edizione	[2. ed]
Descrizione fisica	VII, 246 p. ; 24 cm
Collana	Studi su origine ed attualità del sistema romano ; 3
Disciplina	346.37022
Soggetti	Buona fede - Diritto romano
Collocazione	XXII.2.D. 437
Lingua di pubblicazione	Italiano
Formato	Materiale a stampa
Livello bibliografico	Monografia

2. Record Nr.	UNINA9910254087103321
Autore	DiBenedetto Emmanuele
Titolo	Real Analysis / / by Emmanuele DiBenedetto
Pubbl/distr/stampa	New York, NY : , : Springer New York : , : Imprint : Birkhäuser, , 2016
ISBN	1-4939-4005-8
Edizione	[2nd ed. 2016.]
Descrizione fisica	1 online resource (XXXII, 596 p. 4 illus.)
Collana	Birkhäuser Advanced Texts Basler Lehrbücher, , 2296-4894
Disciplina	515.353
Soggetti	Measure theory Mathematical optimization Calculus of variations Differential equations Approximation theory Mathematics Measure and Integration Calculus of Variations and Optimization Differential Equations Approximations and Expansions Applications of Mathematics
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Nota di contenuto	Intro -- Preface to the Second Edition -- Preface to the First Edition -- Acknowledgments -- Contents -- 1 Preliminaries -- 1 Countable Sets -- 2 The Cantor Set -- 3 Cardinality -- 3.1 Some Examples -- 4 Cardinality of Some Infinite Cartesian Products -- 5 Orderings, the Maximal Principle, and the Axiom of Choice -- 6 Well Ordering -- 6.1 The First Uncountable -- 1c Countable Sets -- 2c The Cantor Set -- 2.1 c A Generalized Cantor Set of Positive Measure -- 2.2c A Generalized Cantor Set of Measure Zero -- 2.3c Perfect Sets -- 3c Cardinality -- 2 Topologies and Metric Spaces -- 1 Topological Spaces -- 1.1 Hausdorff and Normal Spaces -- 2 Urysohn's Lemma -- 3 The Tietze Extension Theorem -- 4 Bases, Axioms of Countability and Product Topologies -- 4.1 Product Topologies -- 5 Compact Topological Spaces -- 5.1 Sequentially Compact Topological Spaces -- 6 Compact Subsets of

$\mathbb{R}^n$  -- 7 Continuous Functions on Countably Compact Spaces --  
 8 Products of Compact Spaces -- 9 Vector Spaces -- 9.1 Convex Sets  
 -- 9.2 Linear Maps and Isomorphisms -- 10 Topological Vector Spaces  
 -- 10.1 Boundedness and Continuity -- 11 Linear Functionals -- 12  
 Finite Dimensional Topological Vector Spaces -- 12.1 Locally Compact  
 Spaces -- 13 Metric Spaces -- 13.1 Separation and Axioms of  
 Countability -- 13.2 Equivalent Metrics -- 13.3 Pseudo Metrics -- 14  
 Metric Vector Spaces -- 14.1 Maps Between Metric Spaces -- 15 Spaces  
 of Continuous Functions -- 15.1 Spaces of Continuously Differentiable  
 Functions -- 15.2 Spaces of Holder and Lipschitz Continuous Functions  
 -- 16 On the Structure of a Complete Metric Space -- 16.1 The Uniform  
 Boundedness Principle -- 17 Compact and Totally Bounded Metric  
 Spaces -- 17.1 Pre-Compact Subsets of  $X$  -- 1c Topological Spaces --  
 1.12c Connected Spaces -- 1.19c Separation Properties of Topological  
 Spaces.  
 4c Bases, Axioms of Countability and Product Topologies -- 4.10c The  
 Box Topology -- 5c Compact Topological Spaces -- 5.8c The  
 Alexandrov One-Point Compactification of  $\{X \cup \{\infty\}\}$  -- 7c  
 Continuous Functions on Countably Compact Spaces -- 7.1c Upper-  
 Lower Semi-continuous Functions -- 7.2c Characterizing Lower-Semi  
 Continuous Functions in  $\mathbb{R}^n$  -- 7.3c On the Weierstrass-Baire  
 Theorem -- 7.4c On the Assumptions of Dini's Theorem -- 9c Vector  
 Spaces -- 9.3c Hamel Bases -- 9.6c On the Dimension of a Vector  
 Space -- 10c Topological Vector Spaces -- 13c Metric Spaces -- 13.10  
 c The Hausdorff Distance of Sets -- 13.11c Countable Products of  
 Metric Spaces -- 14c Metric Vector Spaces -- 15c Spaces of Continuous  
 Functions -- 15.1c Spaces of Holder and Lipschitz Continuous  
 Functions -- 16c On the Structure of a Complete Metric Space -- 16.3c  
 Completion of a Metric Space -- 16.4c Some Consequences of the Baire  
 Category Theorem -- 17c Compact and Totally Bounded Metric Spaces  
 -- 17.1c An Application of the Lebesgue Number Lemma -- 3  
 Measuring Sets -- 1 Partitioning Open Subsets of  $\mathbb{R}^n$  -- 2  
 Limits of Sets, Characteristic Functions, and  $\sigma$ -Algebras -- 3 Measures  
 -- 3.1 Finite,  $\sigma$ -Finite, and Complete Measures -- 3.2 Some Examples  
 -- 4 Outer Measures and Sequential Coverings -- 4.1 The Lebesgue  
 Outer Measure in  $\mathbb{R}^n$  -- 4.2 The Lebesgue--Stieltjes Outer  
 Measure [89, 154] -- 5 The Hausdorff Outer Measure in  $\mathbb{R}^n$  [71]  
 -- 5.1 Metric Outer Measures -- 6 Constructing Measures from Outer  
 Measures [26] -- 7 The Lebesgue--Stieltjes Measure on  $\mathbb{R}$  --  
 7.1 Borel Measures -- 8 The Hausdorff Measure on  $\mathbb{R}^n$  -- 9  
 Extending Measures from Semi-algebras to  $\sigma$ -Algebras -- 9.1 On the  
 Lebesgue--Stieltjes and Hausdorff Measures -- 10 Necessary and  
 Sufficient Conditions for Measurability -- 11 More on Extensions from  
 Semi-algebras to  $\sigma$ -Algebras.  
 12 The Lebesgue Measure of Sets in  $\mathbb{R}^n$  -- 12.1 A Necessary  
 and Sufficient Condition of Measurability -- 13 Vitali's Nonmeasurable  
 Set [168] -- 14 Borel Sets, Measurable Sets, and Incomplete Measures  
 -- 14.1 A Continuous Increasing Function  $f:[0,1] \rightarrow [0,1]$  -- 14.2 On the  
 Preimage of a Measurable Set -- 14.3 Proof of Propositions 14.1 and  
 14.2 -- 15 Borel Measures -- 16 Borel, Regular, and Radon Measures  
 -- 16.1 Regular Borel Measures -- 16.2 Radon Measures -- 17 Vitali  
 Coverings -- 18 The Besicovitch Covering Theorem -- 19 Proof of  
 Proposition 18.1 -- 20 The Besicovitch Measure-Theoretical Covering  
 Theorem -- 1c Partitioning Open Subsets of  $\mathbb{R}^n$  -- 2c Limits of  
 Sets, Characteristic Functions and  $\sigma$ -Algebras -- 3c Measures -- 3.1c  
 Completion of a Measure Space -- 4c Outer Measures -- 5c The  
 Hausdorff Outer Measure in  $\mathbb{R}^n$  -- 5.1c The Hausdorff  
 Dimension of a Set  $E \subset \mathbb{R}^n$  -- 5.2c The Hausdorff Dimension

of the Cantor Set is  $\ln 2/\ln 3$  -- 8c The Hausdorff Measure in  $\mathbb{R}^n$  -- 8.1c Hausdorff Outer Measure of the Lipschitz Image of a Set -- 8.2c Hausdorff Dimension of Graphs of Lipschitz Functions -- 9c Extending Measures from Semi-algebras to  $\sigma$ -Algebras -- 9.1c Inner and Outer Continuity of  $\mu$  on Some Algebra  $\mathcal{Q}$  -- 10c More on Extensions from Semi-algebras to  $\sigma$ -Algebras -- 10.1c Self-extensions of Measures -- 10.2c Nonunique Extensions of Measures  $\mu$  on Semi-algebras -- 12c The Lebesgue Measure of Sets in  $\mathbb{R}^n$  -- 12.1c Inner Measure and Measurability -- 12.2c The Peano--Jordan Measure of Bounded Sets in  $\mathbb{R}^n$  -- 12.3c Lipschitz Functions and Measurability -- 13c Vitali's Nonmeasurable Set -- 14c Borel Sets, Measurable Sets and Incomplete Measures -- 16c Borel, Regular and Radon Measures -- 16.1c Regular Borel Measures -- 16.2c Regular Outer Measures -- 17c Vitali Coverings. 17.1c Pointwise and Measure-Theoretical Vitali Coverings -- 18c The Besicovitch Covering Theorem -- 18.1c The Besicovitch Theorem for Unbounded  $E$  -- 18.2c The Besicovitch Measure-Theoretical Inner Covering of Open Sets  $E \subset \mathbb{R}^n$  -- 18.3c A Simpler Form of the Besicovitch Theorem -- 18.4c Another Besicovitch-Type Covering -- 4 The Lebesgue Integral -- 1 Measurable Functions -- 2 The Egorov--Severini Theorem [39, 145] -- 2.1 The Egorov--Severini Theorem in  $\mathbb{R}^n$  -- 3 Approximating Measurable Functions by Simple Functions -- 4 Convergence in Measure (Riesz [125], Fisher [46]) -- 5 Quasicontinuous Functions and Lusin's Theorem -- 6 Integral of Simple Functions ([87]) -- 7 The Lebesgue Integral of Nonnegative Functions -- 8 Fatou's Lemma and the Monotone Convergence Theorem -- 9 More on the Lebesgue Integral -- 10 Convergence Theorems -- 11 Absolute Continuity of the Integral -- 12 Product of Measures -- 13 On the Structure of  $(\mathcal{A} \times \mathcal{B})$  -- 14 The Theorem of Fubini--Tonelli -- 14.1 The Tonelli Version of the Fubini Theorem -- 15 Some Applications of the Fubini--Tonelli Theorem -- 15.1 Integrals in Terms of Distribution Functions -- 15.2 Convolution Integrals -- 15.3 The Marcinkiewicz Integral ([101, 102]) -- 16 Signed Measures and the Hahn Decomposition -- 17 The Radon-Nikodym Theorem -- 17.1 Sublevel Sets of a Measurable Function -- 17.2 Proof of the Radon-Nikodym Theorem -- 18 Decomposing Measures -- 18.1 The Jordan Decomposition -- 18.2 The Lebesgue Decomposition -- 18.3 A General Version of the Radon-Nikodym Theorem -- 1c Measurable Functions -- 1.1c Sublevel Sets -- 2c The Egorov--Severini Theorem -- 3c Approximating Measurable Functions by Simple Functions -- 4c Convergence in Measure -- 7c The Lebesgue Integral of Nonnegative Measurable Functions -- 7.1c Comparing the Lebesgue Integral with the Peano-Jordan Integral. 7.2c On the Definition of the Lebesgue Integral -- 9c More on the Lebesgue Integral -- 10c Convergence Theorems -- 10.1c Another Version of Dominated Convergence -- 11c Absolute Continuity of the Integral -- 12c Product of Measures -- 12.1c Product of a Finite Sequence of Measure Spaces -- 13c On the Structure of  $(\mathcal{A} \times \mathcal{B})$  -- 13.1c Sections and Their Measure -- 14c The Theorem of Fubini--Tonelli -- 15c Some Applications of the Fubini--Tonelli Theorem -- 15.1c Integral of a Function as the "Area Under the Graph" -- 15.2c Distribution Functions -- 17c The Radon-Nikodym Theorem -- 18c A Proof of the Radon-Nikodym Theorem When Both  $\mu$  and  $\nu$  Are  $\sigma$ -Finite -- 5 Topics on Measurable Functions of Real Variables -- 1 Functions of Bounded Variation ([78]) -- 2 Dini Derivatives ([37]) -- 3 Differentiating Functions of Bounded Variation -- 4 Differentiating Series of Monotone Functions -- 5 Absolutely Continuous Functions ([91, 169]) -- 6 Density of a Measurable Set -- 7

Derivatives of Integrals -- 8 Differentiating Radon Measures -- 9  
 Existence and Measurability of  $D$  -- 9.1 Proof of Proposition 9.2 --  
 10 Representing  $D$  -- 10.1 Representing  $D$  for  $\mathbb{I}$  -- 10.2  
 Representing  $D$  for  $\text{perp}$  -- 11 The Lebesgue-Besicovitch  
 Differentiation Theorem -- 11.1 Points of Density -- 11.2 Lebesgue  
 Points of an Integrable Function -- 12 Regular Families -- 13 Convex  
 Functions -- 14 The Jensen's Inequality -- 15 Extending Continuous  
 Functions -- 15.1 The Concave Modulus of Continuity of  $f$  -- 16 The  
 Weierstrass Approximation Theorem -- 17 The Stone-Weierstrass  
 Theorem -- 18 Proof of the Stone-Weierstrass Theorem -- 18.1 Proof  
 of Stone's Theorem -- 19 The Ascoli-Arzelà Theorem -- 19.1 Pre-  
 compact Subsets of  $C(\bar{E})$  -- 1c Functions of Bounded Variations --  
 1.1c The Function of The Jumps -- 1.2c The Space  $BV[a,b]$  -- 2c Dini  
 Derivatives.  
 2.1c A Continuous, Nowhere Differentiable Function ([167]).

## Sommario/riassunto

The second edition of this classic textbook presents a rigorous and self-contained introduction to real analysis with the goal of providing a solid foundation for future coursework and research in applied mathematics. Written in a clear and concise style, it covers all of the necessary subjects as well as those often absent from standard introductory texts. Each chapter features a "Problems and Complements" section that includes additional material that briefly expands on certain topics within the chapter and numerous exercises for practicing the key concepts. The first eight chapters explore all of the basic topics for training in real analysis, beginning with a review of countable sets before moving on to detailed discussions of measure theory, Lebesgue integration, Banach spaces, functional analysis, and weakly differentiable functions. More topical applications are discussed in the remaining chapters, such as maximal functions, functions of bounded mean oscillation, rearrangements, potential theory, and the theory of Sobolev functions. This second edition has been completely revised and updated and contains a variety of new content and expanded coverage of key topics, such as new exercises on the calculus of distributions, a proof of the Riesz convolution, Steiner symmetrization, and embedding theorems for functions in Sobolev spaces. Ideal for either classroom use or self-study, Real Analysis is an excellent textbook both for students discovering real analysis for the first time and for mathematicians and researchers looking for a useful resource for reference or review. Praise for the First Edition: "[This book] will be extremely useful as a text. There is certainly enough material for a year-long graduate course, but judicious selection would make it possible to use this most appealing book in a one-semester course for well-prepared students." —Mathematical Reviews.
