1. Record Nr. UNISA990005676380203316

Autore	BATAILLE, Georges
Titolo	L' ano solare / Georges Bataille ; a cura e con uno scritto di Sergio Finzi
Pubbl/distr/stampa	Milano : ES, copyr. 1993
Descrizione fisica	78 p. ; 19 cm
Collana	Piccola biblioteca dell'eros ; 2
Disciplina	844.91
Collocazione	XV.18.A. 95 (FDC BAT)
Lingua di pubblicazione	Italiano
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Trad. di: L'anus solaire.

2. Record Nr. UNINA990006892390403321

Titolo	Historical pragmatics : pragmatic developments in the history of English / edited by Andreas H. Jucker
Pubbl/distr/stampa	Amsterdam ; Philadelphia, : John Benjamins publishing company, c1995
ISBN	90-272-5047-2
Descrizione fisica	XV, 625 p. ; 22 cm
Collana	Pragmatics & beyond , New series ; 35
Disciplina	420.9
Locazione	FSPBC
Collocazione	COLLEZ.1892 (35)
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia

3. Record Nr. UNINA9910143415303321

Autore	Scharf Toralf <1967->
Titolo	Polarized light in liquid crystals and polymers [[electronic resource] /] / Toralf Scharf
Pubbl/distr/stampa	Hoboken, N.J., : Wiley-Interscience, c2007
ISBN	1-280-72155-3 9786610721559 0-470-07437-X 0-470-07436-1
Descrizione fisica	1 online resource (412 p.)
Disciplina	530.429 535.52
Soggetti	Polarization (Light) Liquid crystals Polymer liquid crystals Light - Transmission Electronic books.
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Description based upon print version of record.
Nota di bibliografia	Includes bibliographical references and index.
Nota di contenuto	POLARIZED LIGHT IN LIQUID CRYSTALS AND POLYMERS; CONTENTS; Preface; 1 Polarized Light; 1.1 Introduction; 1.2 Concept of Light Polarization; 1.3 Description of The State of Polarization; 1.4 The Stokes Concept; 1.5 The Jones Concept; 1.6 Coherence and Polarized Light; References; 2 Electromagnetic Waves in Anisotropic Materials; 2.1 Introduction; 2.2 Analytical Background; 2.3 Time Harmonic Fields and Plane Waves; 2.4 Maxwell's Equations in Matrix Representation; 2.5 Separation of Polarizations for Inhomogeneous Problems; 2.6 Separation of Polarizations for Anisotropic Problems 4.6 Reflection and TransmissionReferences; 5 Space-Grid Time-Domain Techniques; 5.1 Introduction; 5.2 Description of the FDTD Method; 5.3 Implementation and Boundary Conditions; 5.4 Rigorous Optics for Liquid Crystals; References; 6 Organic Optical Materials; 6.1 Introduction; 6.2 Polymers for Optics; 6.3 Physical Properties of Polymers; 6.4 Optical Properties of Polymers; 6.5 Liquid Crystal Phases;

6.6 Liquid Crystal Polymers; 6.7 Birefringence in Isotropic Materials; 6.8 Form Birefringence; 6.9 Order-Induced Birefringence; 6.10 Optical Properties of Liquid Crystals and Oriented Polymers
References7 Practical Polarization Optics with the Microscope; 7.1 Introduction; 7.2 Microscope Characteristics; 7.3 Polarization Microscope; 7.4 Polarizers; 7.5 Polarization Colors; 7.6 Compensation and Retardation Measurement; 7.7 Conoscopy; 7.8 Local Polarization Mapping; References; 8 Optics of Liquid Crystal Textures; 8.1 Introduction; 8.2 Calculation of Liquid Crystal Director Distributions; 8.3 Optical Properties of Uniform Textures; 8.4 Optical Properties of Liquid Crystal Defects; 8.5 Surface Line Defects in Nematics; 8.6 Defects in Smectic Phases
8.7 Confined Nematic Liquid Crystals8.8 Instabilities in Liquid Crystals; 8.9 Deformation of Liquid Crystal Directors by Fringing Fields; 8.10 Resolution Limit of Switchable Liquid Crystal Devices; 8.11 Switching in Layered Phases; References; 9 Refractive Birefringent Optics; 9.1 Birefringent Optical Elements; 9.2 Fabrication of Refractive Components; 9.3 Optical Properties of Modified Birefringent Components; 9.4 Liquid Crystal Phase Shifters; 9.5 Modal Control Elements; 9.6 Interferometers Based on Polarization Splitting; 9.7 Birefringent Microlenses
9.8 Electrically Switchable Microlenses

Sommario/riassunto

Polarized Light in Liquid Crystals and Polymers deals with the linear optics of birefringent materials, such as liquid crystals and polymers, and surveys light propagation in such media with special attention to applications. It is unique in treating light propagation in micro- and nanostructured birefringent optical elements, such as lenses and gratings composed of birefringent materials, as well as the spatial varying anisotropic structures often found in miniaturized liquid crystal devices.
