| Sommario/riassunto      | European industry, notably the SME sector, is facing many challenges today, including tough competition on the international stage and strict environmental legislation in Europe. Foundries, food and drink producers and plastic manufacturers are just some examples of industrial SMEs where energy consumption and waste are significant, in terms of cost to the business and impact on the environment. To help industry deal with these and other challenges, the Intelligent Energy – Europe initiative continues to support projects with real aims and practical solutions that benefit businesses, the environment and citizens. This brochure provides an overview of some of these projects and illustrates that industry can be both profitable and ‘green’. [Ed.] |

| Sommario/riassunto      | This book contains the revised and extended versions of selected papers from the 10th International Conference, ICAART 2018, held in Funchal, Madeira, Portugal, in January 2018. The 45 full papers together with 42 short papers and 26 Posters were carefully reviewed and selected from 161 initial submissions. The papers are organized in topics such as Agents, Artificial Intelligence, Semantic Web, Multi-Agent Systems, Distributed Problem Solving, Agent Communication and much more. |
