Sommario/riassunto	Renewable energy technology is a reality but has still not penetrated the building sector to the extent that it has become part of our everyday lives. From photovoltaic panels to ground source heat pumps, technology can help consumers save emissions while reducing their energy bills. This brochure details 25 projects aiming to overcome the remaining hurdles renewable energy applications face in buildings, both residential and commercial. With a little push, perhaps better marketing or a new approach from local authorities, these applications can help change Europe's energy map definitively. [Ed.]
