Sommario/riassunto	How do plants react to elements in the soil? A vital question, particularly in today's world of increasing environmental contamination... The answer can be found in this book. It has an extraordinarily broad basis, compiling up-to-date information from numerous specialist disciplines. Key articles are devoted to- Soil Chemistry and Bioavailability- Metal-tolerant Plants- Metalloenzymes- Toxic Effects of Metals- Radionuclides Moreover emphasis is placed on environmental aspects, with detailed considerations of plants that hyperaccumulate heavy metals and
