Sommario/riassunto	Controlled expansion of cell populations is a fundamental feature of living organisms, being a finely-tuned balance between cell proliferation and cell death. This book aims to explain the molecular mechanisms that lie behind the multiplication and survival of eukaryotic cells. This encompasses both the normal regulation of cell populations in development or physiological adaptation and pathological mechanisms of cell cycle control in cancer. Principles of Cell Proliferation progressively introduces the function of growth factors, receptors, signal transduction pathways, gene expr

Sommario/riassunto	Guillaume Farel (1489-1565) was one of the key figures in the early Genevan reformation, but his legacy has become largely overshadowed by towering figure of Calvin. Seeking to contribute to a better understanding of the French-speaking reform movement, this volume offers a rich portrait of Farel's early thought by way of interpretive

essays and translations of primary source texts. The translations of the second half of the volume are some of the first widely-accessible full-length translations of Farel's work into English.
