

1. Record Nr.	UNISA996201763503316
Titolo	2007 International Workshop on the Analysis of Multi-Temporal Remote Sensing Images : Leuven, Belgium, 18 - 20 July 2007 // IEEE
Pubbl/distr/stampa	IEEE
ISBN	1-5090-8938-1
Disciplina	621.36/7
Soggetti	Remote sensing Remote-sensing images Image processing - Digital techniques
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
2. Record Nr.	UNINA9910484859203321
Autore	Swinbank Richard
Titolo	Azure Data Factory by example : practical implementation for data engineers // Richard Swinbank
Pubbl/distr/stampa	[Place of publication not identified] : , : Apress, , [2021] ©2021
ISBN	1-4842-7029-0
Edizione	[1st ed. 2021.]
Descrizione fisica	1 online resource (XXII, 335 p. 148 illus.)
Disciplina	658.40380285574
Soggetti	Data warehousing
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Nota di contenuto	1. Creating an Azure Data Factory Instance -- 2. Your First Pipeline -- 3. The Copy Data Activity -- 4. Expressions -- 5. Parameters -- 6. Controlling Flow -- 7. Data Flows -- 8. Integration Runtimes -- 9. Power Query in ADF -- 10. Publishing to ADF -- 11. Triggers -- 12. Monitoring.

Data engineers who need to hit the ground running will use this book to build skills in Azure Data Factory v2 (ADF). The tutorial-first approach to ADF taken in this book gets you working from the first chapter, explaining key ideas naturally as you encounter them. From creating your first data factory to building complex, metadata-driven nested pipelines, the book guides you through essential concepts in Microsoft's cloud-based ETL/ELT platform. It introduces components indispensable for the movement and transformation of data in the cloud. Then it demonstrates the tools necessary to orchestrate, monitor, and manage those components. The hands-on introduction to ADF found in this book is equally well-suited to data engineers embracing their first ETL/ELT toolset as it is to seasoned veterans of Microsoft's SQL Server Integration Services (SSIS). The example-driven approach leads you through ADF pipeline construction from the ground up, introducing important ideas and making learning natural and engaging. SSIS users will find concepts with familiar parallels, while ADF-first readers will quickly master those concepts through the book's steady building up of knowledge in successive chapters. Summaries of key concepts at the end of each chapter provide a ready reference that you can return to again and again. You will:

- Create pipelines, activities, datasets, and linked services
- Build reusable components using variables, parameters, and expressions
- Move data into and around Azure services automatically
- Transform data natively using ADF data flows and Power Query data wrangling
- Master flow-of-control and triggers for tightly orchestrated pipeline execution
- Publish and monitor pipelines easily and with confidence.
