| Sommario/riassunto      | Cultural Bodies: Ethnography and Theory is a unique collection that integrates two increasingly key areas of social and cultural research: the body and ethnography. Breaks new ground in an area of study that  |

continues to be a central theme of debate and research across the humanities and social sciences  
Draws on ethnography as a useful means of exploring our everyday social and cultural environments  
Constitutes an important step in developing two key areas of study, the body and ethnography, and the relationship between them  
Brings together an inter

#### Sommario/riassunto

This book focuses on the fundamentals of epigenetics, covering the roles of DNA methylation, histone modifications, and non-coding RNA, especially miRNA and lncRNA, in cervical cancer. The chapters discuss various methods to detect epigenetic changes and how these changes could be useful for diagnosis, prognosis, as well as epigenetic therapy. Further chapters address the up-to-date approaches and solutions to the parameterizing bottlenecks associated with the translation of these findings for the management of cervical cancer. The book is supplemented with figures and tables to aid conceptual understanding. The book is relevant for researchers, academicians, scientists, as well as medical students seeking to understand the fundamentals of cervical cancer based on environmental or genetic factors.
