

1. Record Nr.	UNISA996204921503316
Titolo	3rd International Conference on High Performance Computing : proceedings, December 19-22, 1996, Trivandrum, India
Pubbl/distr/stampa	[Place of publication not identified], : IEEE Computer Society Press, 1996
Disciplina	004/.3
Soggetti	High performance computing - Congresses Engineering & Applied Sciences Computer Science
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Bibliographic Level Mode of Issuance: Monograph
2. Record Nr.	UNINA9910437937703321
Autore	Zeng Yijian
Titolo	Coupled dynamics in soil : experimental and numerical studies of energy, momentum and mass transfer : doctoral thesis accepted by University of Twente, The Netherlands / / Yijian Zeng
Pubbl/distr/stampa	New York, : Springer, 2013
ISBN	3-642-34073-3 1-283-93533-3
Edizione	[1st ed. 2013.]
Descrizione fisica	1 online resource (174 p.)
Collana	Springer theses : recognizing outstanding Ph.D. research, , 2190-5053
Disciplina	639.9
Soggetti	Soil dynamics
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Description based upon print version of record.
Nota di bibliografia	Includes bibliographical references.
Nota di contenuto	General Introduction -- Diurnal Pattern of Coupled Moisture and Heat Transport Process -- Application of Diurnal Soil Water Dynamics in Determining Effective Precipitation -- Two-Phase Mass and Heat Flow

Model.- How Airflow Affects Soil Water Dynamics -- Impact of Model Physics on Retrieving Soil Moisture and Soil Temperature -- Concluding Remarks.

Sommario/riassunto

In arid and semi-arid areas, the main contributions to land surface processes are precipitation, surface evaporation and surface energy balancing. In the close-to-surface layer and root-zone layer, vapor flux is the dominant flux controlling these processes - process which, in turn, influence the local climate pattern and the local ecosystem. The work reported in this thesis attempts to understand how the soil airflow affects the vapor transport during evaporation processes, by using a two-phase heat and mass transfer model. The necessity of including the airflow mechanism in land surface process studies is discussed and highlighted.
