Note generali	Bibliographic Level Mode of Issuance: Monograph
Nota di bibliografia	Includes bibliographical references (pages 520-527) and index.
Sommario/riassunto	The study analyses vocational education and training in Germany and contrasts it with the EU's goal of establishing a mobility-promoting European educational area. A comparison with vocational training in other European countries is included. The study presents proposals for overcoming the weaknesses of the German system, which should also contribute to securing dual training in companies and vocational schools.
