| Sommario/riassunto      | Regarding the set of all feature attributes in a given database as the universal set, this monograph discusses various nonadditive set functions that describe the interaction among the contributions from feature attributes towards a considered target attribute. Then, the relevant nonlinear integrals are investigated. These integrals can be applied as aggregation tools in information fusion and data mining, such as synthetic evaluation, nonlinear multiregressions, and nonlinear classifications. Some methods of fuzzification are also introduced for |

| Sommario/riassunto      | Depuis une vingtaine d'années, l'œuvre d'Emmanuel-Joseph Sieyès (1748-1836) fait l'objet de relectures, de redécouvertes. Cette grande                                                                            |

figure intéresse les historiens pour son rôle politique crucial depuis les premiers jours de la Révolution jusqu'à l'arrivée au pouvoir de Bonaparte ; il retient l'attention des juristes, particulièrement celle des publicistes, pour son inventivité en matière constitutionnelle et administrative, à la fois comme praticien et comme théoricien ; il est étudié, enfin, par les philosophes, pour ses apports en philosophie politique et juridique, mais aussi pour son œuvre de métaphysicien, découverte à la faveur de la publication de ses manuscrits inédits. Le recueil Figures de Sieyès entend faire se rencontrer pour la première fois ces différents travaux et permettre à ces champs de se confronter et de s'interpénétrer. Les contributeurs venant de ces différents horizons disciplinaires se sont tous attachés à montrer la richesse de la réflexion de Sieyès et pour l'intelligence de leur propre discipline et pour encourager les décroissements, en passant par exemple de la linguistique au droit constitutionnel, de la métaphysique à l'économie, de l'histoire de l'Italie à la Constitution de l'an III, de Spinoza à l'art oratoire, de Rousseau au nominalisme.
