## Sommario/riassunto

A Companion to Environmental Philosophy is a pioneering work in the burgeoning field of environmental philosophy. This ground-breaking volume contains thirty-six original articles exemplifying the rich diversity of scholarship in this field. Contains thirty-six original articles, written by international scholars. Traces the roots of environmental philosophy through the exploration of cultural traditions from around the world. Brings environmental philosophy into conversation with other fields and disciplines such as literature, economics, ecology, and law.

## Sommario/riassunto

Continuing its consolidated and prestigious tradition, the tenth edition of the International Conference on Web Engineering (ICWE 2010) complemented its research and industrial program with a selection of workshops extending the conference's program. The workshops offered Web engineering researchers and practitioners the opportunity for highly interactive sessions, which included - depth, topical presentations and discussions of emerging research challenges and preliminary results. This volume collects the contributions of the hosted workshops and the co-located Doctoral Consortium.

In light of the need to offer an always novel and interesting program reflecting the emerging research of the Web engineering community, we made a huge effort to renovate the conference's workshop program, to enlarge the choice to authors and participants, and to attract high-quality contributions. The Web engineering community is a constantly growing group that, on the one hand, is working on a set of consolidated topics and, on the other hand, is constantly getting inspired by cutting edge technologies or societal trends. Thus, to enlarge the choice to both potential workshop organizers and authors, in designing this edition's workshop program we pursued two goals: First, we aimed at providing the typical audience

of ICWE with a set of workshop topics that reflect the traditional interests of the community and that are as wide and comprehensive as possible. We achieved this goal thanks to well-established workshops covering topics such as model-driven development, quality and usability of Web applications, rich Internet applications (RIAs), and light-weight, component-based development of Web applications (e. g. , mashups). Second, we wanted to attract new audiences to the conference, selecting also novel workshops that cover topics of an emerging or foundational nature that extend the focus of ICWE beyond its traditional topics. We reached this goal by betting on subjects such as the Semantic Web, semantic data management, the Internet of things, Web-enabled tourism, service-based compliance management, and e-crowdsourcing.
