Family caring and psychosocial distress

Sommario/riassunto

This book is the third in a series with the International Association for the Scientific Study of Intellectual Disabilities (Series Editor: Matthew P. Janicki). These publications are designed to address the issues of health, adult development and aging among persons with intellectual disabilities. For many years it has been recognized that some adults with intellectual disabilities are at elevated risk for mental and behavioral health problems. Often the aging process can complicate the identification, diagnosis, treatment and prevention of this type of dual diagnosis and present
