Re-creating the Middle Ages / Clare Simmons; Guide to further reading; Index.
Sommario/riassunto	The cultural life of England over the long period from the Norman Conquest to the Reformation was rich and varied, in ways that scholars

are only now beginning to understand in detail. This Companion introduces a wide range of materials that constitute the culture, or cultures, of medieval England, across fields including political and legal history, archaeology, social history, art history, religion and the history of education. Above all it looks at the literature of medieval England in Latin, French and English, plus post-medieval perspectives on the 'Middle Ages'. In a linked series of essays experts in these areas show the complex relationships between them, building up a broad account of rich patterns of life and literature in this period. The essays are supplemented by a chronology and guide to further reading, helping students build on the unique access this volume provides to what can seem a very foreign culture.

Sommario/riassunto	Will the twenty-first century be the next American Century? Will

American power and ideas dominate the globe in the coming years? Or is the prestige of the United States likely to crumble beneath the pressure of new international challenges? This ground-breaking book explores the changing patterns of American thought and culture at the dawn of the new millennium, when the world's richest nation has never been more powerful or more controversial. It brings together some of the most eminent North American and European thinkers to investigate the crucial issues and challenges facing the United States during the early years of our new century. From the subterranean political shifts beneath the electoral landscape to the latest biomedical advances, from the literary response to 9/11 to the rise of reality television, this book explores the political, social and cultural contours of contemporary American life - but it also places the United States within a global narrative of commerce, cultural exchange, international diplomacy, ideological conflict and war. These eighteen new essays address such pressing issues as leadership, foreign policy, propaganda, religion, health, technology, immigration, 9/11 culture and digital media. Searching for the roots of our contemporary concerns, the authors look back to the Clinton years and even earlier periods of twentieth-century American life. But they also look forward to the new horizons of the century to come - to the unanticipated dangers of a global future and to the soaring possibilities of American enterprise and imagination.
